Title:
ACROPARESTHESIA
Numbness of extremities.

Part of the Following:
Large Scale Study of the Safety and Efficacy
of the SCIO Device

Developed By:
The Centro Ricerche of Prof. William Nelson University of Venice +
Padova, Italy

This study was performed in the field by practicing Biofeedback
technicians. Data was collected and the study supervised by the Ethics
International Institutional Review Board of Romania. The Data analysis and
study presentation is done By the The Centro Ricerche, University of
Venice + Padova, Italy

Abstract:

This study demonstrates the safety and effective qualities of the SCIO device used in a large scale study. A large scale study of over 97,000 patients with over 275,000 patient visits reported their diseases. Many of them reported this disease. And the results of their therapy is reported in this study.

Introduction:

Over View:

This large scale research was designed to produce an extensive study of people with a wide variety of diseases to see who gets or feels better while using the SCIO for stress reduction and patient monitoring. The SCIO is a evoked potential Universal ElectroPhysiological Medical apparatus that gauges how an individual reacts to miscellaneous homeopathic substances. The device is registered in Europe, America, Canada, S Africa, Australia, S. America, Mexico and elsewhere. The traditional software is fully registered. Some additional functions where determined by the manufacturer to be worthy of evaluation. Thus a study was necessary to determine safety and efficacy. (As a result of these studies these additional functions are now registered within the EC)

An European ethics committee was officially registered and governmental permission attained to do the insignificant risk study. Qualified registered and or
licensed Biofeedback therapists where enlisted to perform the study. Therapists were enrolled from all over the world including N. America, Europe, Africa, Australia, Asia, and S. America. They were trained in the aspects of the study and how to attain informed consent and transmit the results to the ethics committee or IRB (Institutional Review Board).

2,569 therapists enlisted in the study. There were 98,760 patients. 69% had more than one visit. 43% had over two visits. There were over 275,000 patient visits recorded. The therapists were trained and supervised by medical staff. They were to perform the SCIO therapy and analysis. They were to report any medical suspected or confirmed diagnosis. Therapists personnel are not to diagnose outside of the realm of their scope of practice. Then the therapist is to inquire on any reported changes during the meeting and on follow-ups any measured variations. It must be pointed out that the Therapists were free to do any additional therapies they wish such as homeopathy, nutrition, exercise, etc. Therapists were told to not recommend synthetic drugs. Thus the evaluation was not reduced to just the device but to the total effect of seeing a SCIO therapist.

Part 1. The emphasis was on substantiating safety followed by efficacy of the SCIO.
Part 2. Proving the efficacy of the SCIO on diseases (emphasis on degenerative disease)
Part 3. Proving the efficacy of the SCIO on the avant garde therapies of Complementary Med
Part 4. QQC standardization

Methods and Materials:

SCIO Device:
The SCIO is an evoked potential Universal Electro-Physiological Medical device that measures how a person reacts to items. It is designed to measure reactions for allergy, homeopathy, nutrition, sarcoades, nosodes, vitamins, minerals, enzymes and many more items. Biofeedback is used for pre-diagnostic work and or therapy.

The QXCI software will allow the unconscious of the patient to guide to repair electrical and vibrational aberrations in your body. For complete functional details and pictures, see appendix.

Subspace Software:
The QXCI software is designed for electro-physiological connection to the patient to allow reactivity testing and rectification of subtle abnormalities of the body electric. If a patient is not available a subspace or distance healing link has been designed for subspace therapeutics. Many reports of the success of the subspace have been
reported and thus the effectiveness and the safety of the subspace link is part of this test. Many companies have tried to copy the subspace of Prof. Nelson and their counterfeit attempts have ended in failure.

**SOC Index:**

The SCIO interview opens with a behavioral medicine interview. This is called the SOC Index. Named after the work of Samuel Hahneman the father of homeopathy, he said that the body heals itself with it’s innate knowledge. But the patient can suppress or obstruct the healing process with some behavior. Hahneman said that the worst way to interfere with the healing natural process was allopathy or synthetic drugs. Theses upset the natural healing process by unnatural intervention and regulation disturbance. Other ways to Suppress or Obstruct the Cure are smoking, mercury amalgams, stress, lack of water, exercise and many others. This behavioral survey then gives an index of SOC.

The scores relate to the risk of Suppression and Obstruction to the natural Cure. The higher the scores the more the Suppression and or Obstruction. The scores of 100 or lower are ideal. A copy of the SOC index questions appear in the appendix.

**Study Technicians:**

The study technicians were educated and supervised by medical officers. The study technicians were to execute the SCIO therapy and analysis. All were trained to the standards of the International Medical University of Natural Education. Therapists from all over the world including N. America, Europe, Africa, Australia, Asia, S. America and elsewhere were enlisted to perform the study according to the Helsinki study ethics regulations.

They were to chronicle any medical suspected or confirmed diagnosis. Therapists personnel are not to diagnose outside of the realm of their scope of practice. Then the study technician is to inquire on any disclosed observations during the test and on follow-ups report any measured changes.

To test the device as subspace against the placebo effect, two of the 2,500+ therapists were given placebo SCIO devices that were totally outwardly the same but were not functional. These two blind therapists were then assigned 35 patients each (only 63 showed). This was to assess the double blind factor of the placebo effect as compared to the device. Thus the studied groups were A. placebo group, B. subspace group, and C. attached harness group.

Cross placebo group manipulation was used to further evaluate the effect.

**Important Questions:** these are the key questions of the study

1. Define Diseases or Patient Concerns
2. Percentage of Improvement in Symptoms
3. Percentage of Improvement in Feeling Better
4. Percentage of Improvement Measured
5. Percentage of Improvement in Stress Reduction
6. Percentage of Improvement in SOC Behavior
7. What Measured+How (relevant measures to the patient’s health situation)
8. If Patient worsened please describe in detail involving SOC__

After the patient visit is was complete the data was e-mailed to the Ethics
Committee or IRB for storage and then analysis. This maneuver minimized the risk of data loss or tampering. Case studies were reported separately in the disease analysis.

MEDICAL DETAILS

Intense prickling, tingling or numbness of fingers and hands occurring usually following sleep, more often in women than men. May be severe in some cases. Avoid nicotine and cholesterol.

Results:

Before we review the direct disease improvement profiles, we need to review the overall results. The first most basic of question in the results is the basic feedback of the generic patient conditions.

1. Percentage of Improvement in Symptoms
2. Percentage of Improvement in Feeling Better
3. Percentage of Improvement Measured
4. Percentage of Improvement in Stress Reduction
5. Percentage of Improvement in SOC Behavior

The SOC index gives us great insight to this study. Each disease has a different cut off where the ability of the SCIO to help was compromised. As a general index scores of 200 + where much less successful.

This groups significant SOC cut off was 120.

The Large scale study had over 98,000 patients and 275,000 patient visits we have direct evidence of the safety and efficacy. A placebo group was used for the large scale test to help validate the results.

This disease group total number of patients was 458

Subspace Treatment 221 patients, 237 SCIO Harness Patients

OVERALL ASSESSMENT

A. Subspace Treatment 433 patient visits

There were 0 cases of patients who reported a negative Improvement.
None of these cases reported any major difficulty.

There were

0 cases reporting no improvement of Symptoms, .001% of Subgroup
3 cases reporting no improvement in feeling better, .001% of Subgroup
3 cases reporting no improvement in stress reduction .001% of Subgroup

12%--- Percentage of Improvement in Symptoms
23%--- Percentage of Improvement in Feeling Better
47%---Percentage of Improvement Measured
33%-- Percentage of Improvement in Stress Reduction
11%----Percentage of Improvement in SOC Behavior

B. SCIO Harness Treatment 458 patient visits

There were 0 cases of patients who reported a negative Improvement.
None of these cases reported any major difficulty.
There were
21 cases reporting no improvement of Symptoms, 4% of Subgroup
4 cases reporting no improvement in feeling better, 1% of Subgroup
1 cases reporting no improvement in stress reduction  % of Subgroup
45%--- Percentage of Improvement in Symptoms
69%--- Percentage of Improvement in Feeling Better
44%----Percentage of Improvement Measured
65%-- Percentage of Improvement in Stress Reduction
24%----Percentage of Improvement in SOC Behavior

CASE STUDY REPORT CONDENSATION:

"On June 9th of 2004 I had 3 30" bifold doors fall on me and stuck me on the head and top of the shoulders. Two days later I had lost all feeling down both arm while driving. I am still dealing with this today and I have numbness, loss of arm strength and a bulge in the disc at C5-6. I have been told that I need surgery, fusion or disc replacement done, but I have tried to put it off as long as I can. If it had not been for the SCIO I would not have done as well as I have. First my Doctor friend would tell me when thing got emotional to sit down an do a SCIO session and it calms things right down. She also knows this from her own experience how it helps with emotional issues. The pain and numbness has been so bad that it again brought up the suicide piece but with a SCIO I have been able to help me get through this and now I do not even think about the suicide when things get tough. While the pain was running down my arm was so intense I could hardly stand it. I had a friend do a session on me with the SCIO. I had my doubts about this really working, until I had the roller used on my shoulder neck area for the nerve issue. Every time this friend would roll the roller over this area it would shoot a pain down my arm and intensify the pain, which then I would yell ouch. This didn't happen on the other side where the nerve was not pinched. So this made me a believer that the roller was doing something. Not only am I dealing with the physical and emotional issues with the doors having fallen on me I have had to cut my work load in half and have lost a lot of client over this. I also have to continue to have the pressure to keep the work going on the basement to hold the permit open, so there is this financial, emotional and physical stress. I also have a lawsuit against Home Depot which adds a great deal of stress emotional. Then I am having to work in pain and with numbness to not loose my house and everything I have work so hard for. This has
had a huge affect on my life financially, physically and emotionally. In the past I have always been very strong and now I cannot make my body work and push through thing. Also I have been having car problems and have spent $7000-$9000 dollars on car repairs to try and fix my car and it isn't still right. On top of this in August I left a fill line run on my salt water tank and killed all my fish and did $16,000 worth of water damage to my house. This only bought more stress on with dealing with the insurance company and the mortgage company. Then at the end of August I had to put my little sheltie down which I had for 12 years. Then a week later I had a client get fed through a corn chopper and ground up, which was a shock and tripped off a lot of emotions. In October Home Depot sent me to see their physician and he did a EMG which tripped off and pain and numbness to a level of 10 on a scale of 1-10 which I had been maintaining at a level of 3 for some time. I still have not slept a whole night without waking up with pain and numbness in my arms since June 9th 2004. And even with all this going on I still have been doing very well considering all that I am under and dealing with. In fact my Dr friend commented that in the past one of these things would have been enough to set me over the edge and she is amazed at how well I am doing with all of this. I deal with life and stress in a much different way than I have ever done in my life and I that it is due to the SCIO.

Greeley, Colorado"

“Age 52 – numbness in left hand completely subsided after one session.

City Unknown”

“Putting myself on the EPFX after several times my chronic bronchial problems are almost none existent with only rare episodes of coughing fits. Diagnosed Carpel Tunnel with numbness in the fingers of my right hand is about 75% improved. I am sure if I put myself on my often there would have been greater improvement.

City Unknown”

**USUAL or CUSTOMARY TREATMENT PLAN:**
Avoid nicotine and cholesterol. Exercise 20 min per day 5 times a week. Circulation; Thoracic; Hygly; Vitamin C Liquescence; Heart Liquescence; Phosphatidyl Choline; Crystallized Cell Salts; Exercise; Vitamin E

**SCIO TREATMENT SUGGESTED**

**Color** - set patient's favorite if desired, or choose color by chackra that is deficient

**Cosmic:** set 1 for physical body, 2 for astral, 3 for etheric, 4 for mental, 5 for cosmic, 6 for other

**Magnetic Method** - 1+10 is universal, 7 for detox, 8 for regrowth of new tissue, 3 for injury, 2 for metabolic correction, 5 for inflamation, 6 for infection, 9 for psych stress, 2
for energy stimulation

**Frequency**- 1k, 555hz, 33hz, 1111hz

Auto Trivector for 30 min once a month in early stages once a week in later stage.

**Discussion:**

The results show significant improvement in symptoms and feeling better. The Collective results show a dramatic benefit to the SCIO therapist visit.
