Padova, Italy

This study was performed in the field by practicing Biofeedback
technicians. Data was collected and the study supervised by the Ethics
International Institutional Review Board of Romania. The Data analysis and
study presentation is done By the The Centro Ricerche, University of
Venice + Padova, Italy

Abstract:

This study demonstrates the safety and effective qualities of the SCIO device used in a large scale study. A large scale study of over 97,000 patients with over 275,000 patient visits reported their diseases. Many of them reported this disease. And the results of their therapy is reported in this study.

Introduction:

Over View:

This large scale research was designed to produce a extensive study of people with a wide variety of diseases to see who gets or feels better while using the SCIO for stress reduction and patient monitoring. The SCIO is a evoked potential Universal ElectroPhysiological Medical apparatus that gauges how a individual reacts to miscellaneous homeopathic substances. The device is registered in Europe, America, Canada, S Africa, Australia, S. America, Mexico and elsewhere. The traditional software is fully registered. Some additional functions where determined by the manufacturer to be worthy of evaluation. Thus a study was necessary to determine safety and efficacy. (As a result of these studies these additional functions are now registered within the EC)
An European ethics committee was officially registered and governmental permission attained to do the insignificant risk study. Qualified registered and or licensed Biofeedback therapists where enlisted to perform the study. Therapists were enrolled from all over the world including N. America, Europe, Africa, Australia, Asia, and S. America. They were trained in the aspects of the study and how to attain informed consent and transmit the results to the ethics committee or IRB (Institutional Review Board).

2,569 therapists enlisted in the study. There were 98,760 patients. 69% had more than one visit. 43% had over two visits. There were over 275,000 patient visits recorded. The therapists were trained and supervised by medical staff. They were to perform the SCIO therapy and analysis. They were to report any medical suspected or confirmed diagnosis. Therapists personnel are not to diagnose outside of the realm of their scope of practice. Then the therapist is to inquire on any reported changes during the meeting and on follow-ups any measured variations. It must be pointed out that the Therapists were free to do any additional therapies they wish such as homeopathy, nutrition, exercise, etc. Therapists were told to not recommend synthetic drugs. Thus the evaluation was not reduced to just the device but to the total effect of seeing a SCIO therapist.

Part 1. The emphasis was on substantiating safety followed by efficacy of the SCIO.
Part 2. Proving the efficacy of the SCIO on diseases (emphasis on degenerative disease)
Part 3. Proving the efficacy of the SCIO on the avant garde therapies of Complementary Med
Part 4. QQC standardization

Methods and Materials:
SCIO Device:
The SCIO is an evoked potential Universal Electro-Physiological Medical device that measures how a person reacts to items. It is designed to measure reactions for allergy, homeopathy, nutrition, sarcoedes, nosodes, vitamins, minerals, enzymes and many more items. Biofeedback is used for pre-diagnostic work and or therapy.

The QXCI software will allow the unconscious of the patient to guide to repair electrical and vibrational aberrations in your body. For complete functional details and pictures, see appendix.

Subspace Software:
The QXCI software is designed for electro-physiological connection to the patient to allow reactivity testing and rectification of subtle abnormalities of the body electric. If
a patient is not available a subspace or distance healing link has been designed for subspace therapeutics. Many reports of the success of the subspace have been reported and thus the effectiveness and the safety of the subspace link is part of this test. Many companies have tried to copy the subspace of Prof. Nelson and their counterfeit attempts have ended in failure.

**SOC Index:**

The SCIO interview opens with a behavioral medicine interview. This is called the SOC Index. Named after the work of Samuel Hahneman the father of homeopathy, he said that the body heals itself with it’s innate knowledge. But the patient can suppress or obstruct the healing process with some behavior. Hahneman said that the worst way to interfere with the healing natural process was allopathy or synthetic drugs. Theses upset the natural healing process by unnatural intervention and regulation disturbance. Other ways to Suppress or Obstruct the Cure are smoking, mercury amalgams, stress, lack of water, exercise and many others. This behavioral survey then gives an index of SOC.

The scores relate to the risk of Suppression and Obstruction to the natural Cure. The higher the scores the more the Suppression and or Obstruction. The scores of 100 or lower are ideal. A copy of the SOC index questions appear in the appendix.

**Study Technicians:**

The study technicians were educated and supervised by medical officers. The study technicians were to execute the SCIO therapy and analysis. All were trained to the standards of the International Medical University of Natural Education. Therapists from all over the world including N. America, Europe, Africa, Australia, Asia, S. America and elsewhere were enlisted to perform the study according to the Helsinki study ethics regulations.

They were to chronicle any medical suspected or confirmed diagnosis. Therapists personnel are not to diagnose outside of the realm of their scope of practice. Then the study technician is to inquire on any disclosed observations during the test and on follow-ups report any measured changes.

To test the device as subspace against the placebo effect, two of the 2,500+ therapists were given placebo SCIO devices that were totally outwardly the same but were not functional. These two blind therapists were then assigned 35 patients each (only 63 showed). This was to assess the double blind factor of the placebo effect as compared to the device. Thus the studied groups were

A. placebo group, B. subspace group, and C. attached harness group.

Cross placebo group manipulation was used to further evaluate the effect.

**Important Questions:** these are the key questions of the study

1. Define Diseases or Patient Concerns
2. Percentage of Improvement in Symptoms
3. Percentage of Improvement in Feeling Better
4. Percentage of Improvement Measured
5. Percentage of Improvement in Stress Reduction
6. Percentage of Improvement in SOC Behavior
7. What Measured+How (relevant measures to the patient’s health situation)
8. If Patient worsened please describe in detail involving SOC
   After the patient visit is was complete the data was e-mailed to the Ethics Committee or IRB for storage and then analysis. This maneuver minimized the risk of data loss or tampering. Case studies were reported separately in the disease analysis.

MEDICAL DETAILS

An acute catarrhal inflammation of the upper respiratory tract. It is highly contagious. Incubation period is from 18 to 48 hours. 3 days onset, 3 days cold, 3 days recovery. Lasting immunity does not develop. Onset is abrupt after a short (1 to 3 days) incubation period. Illness generally begins with nasal or throat discomfort, followed by sneezing, rhinorrhea, and malaise. Characteristically, it is an afebrile illness, but fever of 38 to 39C (100 to 102F) can occur, especially in infants and children. Pharyngitis is regularly present early; laryngitis and tracheitis with substernal tightness and burning discomfort vary with the individual and with the etiologic agent. Nasal secretions, watery and profuse during the first day or two of symptoms, become more mucoid and purulent; mucopurulent nasal discharge does not necessarily indicate a bacterial suprainfection. Hacking cough with scanty sputum often lasts into the 2nd wk. An exacerbation of persistent bronchitis after a cold is common in people with chronic respiratory tract disease. Severe tracheo_bronchial involvement with purulent sputum suggests primary or secondary bacterial infection. Exacerbation of bronchoconstriction in asthmatics and bronchitic patients is frequently initiated by a common cold. Purulent sinusitis or otitis media are bacterial complications. In the absence of complications, symptoms normally resolve in 4 to 10 days.

- Congestion of nasal mucosa with partial or complete occlusion of nostrils
- Continuous watery discharge with more or less continuous sniffing and blowing of nose
- Headaches
- Constitutional symptoms may appear such as fever, body aches, easy fatigability and sensations of chilliness

Results:

Before we review the direct disease improvement profiles, we need to review the overall results. The first most basic of question in the results is the basic feedback of the generic patient conditions.

1. Percentage of Improvement in Symptoms
2. Percentage of Improvement in Feeling Better
3. Percentage of Improvement Measured
4. Percentage of Improvement in Stress Reduction
5. Percentage of Improvement in SOC Behavior

The SOC index gives us great insight to this study. Each disease has a different
cut off where the ability of the SCIO to help was compromised. As a general index scores of 200 + where much less successful.

**This groups significant SOC cut off was 175.**

The Large scale study had over 98,000 patients and 275,000 patient visits we have direct evidence of the safety and efficacy. A placebo group was used for the large scale test to help validate the results.

This disease group total number of patients was 17,598

**Subspace Treatment 12,720 patients, 4,878 SCIO Harness Patients**

**OVERALL ASSESSMENT**

**A. Subspace Treatment 17,901 patient visits**

There were 7 cases of patients who reported a negative Improvement. None of these cases reported any major difficulty.

There were

- 9 cases reporting no improvement of Symptoms, .001% of Subgroup
- 11 cases reporting no improvement in feeling better, .001% of Subgroup
- 6 cases reporting no improvement in stress reduction, .001% of Subgroup

24% – Percentage of Improvement in Symptoms
25% – Percentage of Improvement in Feeling Better
28% – Percentage of Improvement Measured
40% – Percentage of Improvement in Stress Reduction
12% – Percentage of Improvement in SOC Behavior

**B. SCIO Harness Treatment 7,820 patient visits**

There were 11 cases of patients who reported a negative Improvement. None of these cases reported any major difficulty.

There were

- 8 cases reporting no improvement of Symptoms, .001 % of Subgroup
- 10 cases reporting no improvement in feeling better, .001 % of Subgroup
- 2 cases reporting no improvement in stress reduction .001 % of Subgroup

45% – Percentage of Improvement in Symptoms
43% – Percentage of Improvement in Feeling Better
65% – Percentage of Improvement Measured
68% – Percentage of Improvement in Stress Reduction
15% – Percentage of Improvement in SOC Behavior
“I had a client with a swollen lymph node near her ear - it was causing her a lot of discomfort. After only one session for stress relief, she reported the swelling had gone down and the area around the lymph node was no longer painful.

A client was suffering from burning and stinging pain and itching deep in the tissues in her shoulder and arms. This pain was worse during the night and she was getting very little sleep. After six to eight EPFX sessions for stress, the pain and itching were significantly reduced and she could sleep through the night.

After three or four EPFX sessions for stress relief, a client diagnosed with emphysema was able to discontinue her oxygen. She still relied on her steroid inhaler for occasional asthma attacks, but refused to make dietary or lifestyle changes that might have helped to alleviate the asthma.

A client had been suffering with neck and back pain from a car accident which occurred over 20 years ago. She felt an immediate relief from pain after only one session stress relief.

A client called me one night from California seeking relief from severe flu-like symptoms. I used sub-space for her session. The next morning she reported feeling much better and was able to rest soon after her distance session for stress began.

A client called from Texas - her husband had fallen and was in the hospital with a serious concussion, bleeding on the brain, and broken bones in his shoulder. After several distance sessions to relieve stress, the bleeding stabilized and his doctors and physical therapists were amazed at the rate that his injuries were healing.

A friend asked for help for her mother recovering from a mastectomy. I started a distance session for stress about the time she was placed in the recovery room at the hospital. She reported very little pain and healed very quickly - not only physically but emotionally as well.

New Mexico, U.S.A.”

“The first thing I did with our biofeedback computer was run a customer who was told he had cancer. He had a basketball sized tumor on his stomach and had been to Mexico in the Donsbach clinic. I used Rife frequency to zap the cancer. I think I ran him three times -- each time using a different strategy. The last time I ran him, it came up in the risk profile that cancer was no longer a risk. I told him. He was shocked and speechless. Then he got happy. He said he was going to the Mayo Clinic to get checked. A couple of days after his appointment I found out they confirmed that he was cancer-free.
I run myself the most. I am 61 years old. I haven't been to a doctor in years and years, except for elective things like laser eye surgery. I look like I'm 40. I ride a bike, ski, play golf, play the piano, write company literature etc. I give the magnets some credit but since I've been using the computer I've felt better than ever before. I have probably had one cold in the last year with no flu. I do the anti-aging programs.

Female patient, 54 years old. Her issues were menopause. Her hot flashes were unbearable. In the middle of the session she started getting a hot flash and it never materialized. Her symptoms are decreasing and decreasing regularly.

City unknown"

“Treated everyone in my family (using harnesses) when they showed first signs of viruses (particularly bad winter for viruses in my area) and without exception, all viruses minimized or gone by the next day. These were, however, not diagnosed by a physician.
Treated a 16 year old girl with stress fractures in her feet. She is a ballet dancer and bulimia showed in her matrix. This was unknown to her parents. Low minerals were also showing. After one treatment she had 60% less pain – this is after months of traditional approaches.

Treated a 40 year old female with whiplash following a car accident. Previous approaches were physiotherapy, ice, acupuncture, deep massage, exercise, etc. No relief as she is a hairdresser and it was the Christmas season (busy busy busy). After one treatment with the EPFX she had approximately 50% less pain. Subsequent to the second treatment she had virtually no pain despite working long, hard hours at work in less than ideal postures.

Treated a 26 year old male with brain cancer, going through a second brain surgery. On the day of subspace treatment, he was scheduled for tests for memory, etc. and reported that he felt extremely strong. He also feels that the recovery from his surgery is dramatically different from his previous surgery.
Treated my own back, which I injured for the 3rd time this year by lifting my baby. I suspect it was a bulging disc. The two earlier episodes left me in bed, immobilized, for 2 days each time. This third time, with the device, I was able to go out to an event that same evening.
Treated my own acute abscess. Device reduced bacterial infection from a situation needing morphine to a pain free, non infection state.
Vancouver, Canada”

BAD COLD:

"I had a bad cold and was very sick in bed. Within an hour of doing biofeedback my cold is dramatically improved. It just really helps!"
Ocala, FL

“Since starting to work with the EPFX device some of the most dramatic and easily
observed results have been with the "flu season" and its symptoms. A feeling of improvement and reduced fever is observed within the first 30 minutes of treatment. This, however, is not uncommon for the type of work that I have observed for many years except it amazes me that the EPFX is able to allow this result by removing the energetic interference. I saw a 1 year old today that had a 103 F fever last night and through today. She was at 102 upon presentation today. During treatment the fever spiked higher and then by the end of treatment (45 minutes) the temperature returned back to near normal. The child was very uncomfortable and would not allow me to work on her in the usual form of procedures that we do at the office. I therefore began treatment with the EPFX device. By the end of treatment the child had fallen asleep. Follow up phone conversation with the mother 4+ hours later and the fever was still much reduced and measured at 99 to 100. Much improved from the 103 for the last 48 hrs. She had visited the pediatrician earlier in the day and was released with a diagnosis of viral flu symptoms with no medications prescribed. To allow me to treat the child when I otherwise could not was a great success in my opinion.

D.C., U.S.A"

“I have had my device for a year now and I have found much relief from my back aches and leg disorders. I own my own business and cannot afford to be sick…if I get a flue, I hook up and the device brings be back to functional.

My husband, also 48 has suffered greatly with a knee problem and a hip problem from an accident involving a head on collision with a logging truck. The device has brought him over night relief and we are both very grateful for the lack of pain in our lives that your device has brought to us.

My step son allowed me to hook him up when he has a disabling flue, and was given relief almost instantly.

City Unknown, Canada"

“I have been a practitioner of alternative/complimentary medicine for 15 years. I am licensed in massage therapy, polarity therapy and cranio-sacral therapy. I have had advanced training with the EPFX. I do not diagnose in any of my work. My intention is primarily for physical and emotional stress relief. The magnitude of this device is tremendous. With it I have the capability to introduce relaxation and stress reduction to the body as a whole in a more efficient manner than any of my other therapies. So many clients have reported improved sleep, mood shift, ease in breathing, even pain relief.

One client, a 50 y.o woman, came to me one winter in 2003, with congested breathing telling me that she gets bronchitis every winter since she was 9 months old. She has had antibiotics and cough suppressants, with only temporary relief. Since she was in the middle of such a stronghold of infection I encouraged her to continue with the physicians orders and I could use the EFPX as a support measure. I also consulted with a trusted doctor of oriental medicine. His suggestion was to begin sessions in the
fall prior to the onset of bronchitis. So the following fall, she chose to see me weekly. I simply ran through a protocol of stress reduction in the primary systems that were involved. She also chose to stay away from dairy products as they may have influenced further mucous formation. December came and went without even a sniffle, as did January and February. She was amazed, and frankly so was I. She was so excited with all the energy she now had available to her, since her body was not fighting the typical infection she had had for 50 years.

The following autumn she returned, spacing our sessions every 2-3 weeks apart. Again, no bronchitis. The following year, 2006, she returned again, we had only 3-4 sessions that winter. She has had no symptoms of bronchitis again. This has changed her life, honestly.

City Unknown”

“On at least 4 separate occasion I have had a sore throat and I had my husband or daughter use the auto zap on the EPFX machine for Flu, pathogens, virus and bacteria and within one to one and half hour the sore throat was gone and did not come back. I was 59 years old at the time. I work in a retail store so I am exposed to virus and bacteria all the time. I'm so glad I have the EPFX machine to avoid the doctor's office and the pharmacy lines.

City Unknown”

“Age 1 - cough and cold symptoms cleared up after one session.

City Unknown”

**USUAL or CUSTOMARY TREATMENT PLAN:**

Avoid sharing food or beverages with someone with a cold, kissing someone with a cold, not bundling up against the cold, sitting in a draft, and stepping outside with a wet head. Avoid smoking if you have sore throat. Avoid dairy products, white sugar, white wheat flour, and meat.

**COLD AND FLU CHART**

<table>
<thead>
<tr>
<th>Question</th>
<th>Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is there a fever?</td>
<td>Anti_Inflammation</td>
</tr>
<tr>
<td></td>
<td>Viral Immune System Stimulator</td>
</tr>
</tbody>
</table>
Are there flu symptoms?  

Are there cold symptoms?  

Is there a cough?  

Are there swollen glands?  

Camphor: When chill is still present pills (Mother Tincture O) should be taken every fifteen to twenty minutes until the chills stop.
Aconitum: One to three doses every one to two hours, in 6X potency.
Euprasia: One dose every two hours, 6X potency.
Sanguinaria: For acrid coryza (head cold) with tight chest and watery mucus, one dose every two hours, 6X potency.
Magnesia muriatica: For loss of smell and taste with colds, six doses every four hours, 12X potency.

Herbs:
Chinese
Pueraria nasal combination: For stuffy and runny nose.
Yin_Chiao: Eight tablets daily are excellent supplements.
Pinellia and Magnolia combination(Pan_Hsiahou_Pu_Tang) is very good for moist, harsh coughs and throat pain.
Western
The following herbs may be taken seperately or in a combined tea in a ont_to_one ratio:
Elder flower (Sambucus nigra) Yarrow (Achillea millefolium)
Peppermint (Mentha piperita)
Drink the tea three to four times daily, or take powdered herbs in
capsule form twice daily.
Sea buckthorn (Hippophe rhamnoids): Will help reduce fever. Press
the berries, skin, and pits; drink juice.
VIR; Vitamin C Liquescence; Immune Stim; Fatty Acid Liquescence;
Anti_Inflammation; Adrenal Liquescence:
Colds: Take easily, FERRUM PHOSPHORICUM. Immediately when there
has been exposure to cold so that the chill can be felt inwardly,
give CAMPHORA every half hour for four doses, follow with ACONITE
every hour for four hours, then every three hours for the next
twelve hours, if not on the road to recovery obtain the symptoms
and give, ALLIUM CEPA, GELSEMIUM, BRYONIA ALBA, ARSENICUM ALBUM, or
whatever the symptoms indicate. If having been exposed to wet and
cold when hot or cold or as the result of having iced drinks when
hot, DULCAMAR six doses, or BELLIS PERENNIS for six hours. For a
cold which has got worse, much sneezing and mucus from the nose,
thick discharge, MERCURIUS SOLUBILIS hourly.

SCIO TREATMENT SUGGESTED

Color - set patient's favorite if desired, or choose color by chackra that is deficient
Cosmic: set 1 for physical body, 2 for astral, 3 for etheric, 4 for mental, 5 for cosmic, 6
for other
Magnetic Method - 1+10 is universal, 7 for detox, 8 for regrowth of new tissue, 3 for
injury, 2 for metabolic correction, 5 for inflammation, 6 for infection, 9 for psych stress, 2
for energy stimulation
Frequency - 1k, 555hz, 1111hz, 2500--2900hz
Auto Frequency for 30 min once a month in early stages once a week in later stage.
Auto Trivector for 30 min once a month in early stages once a week in later stage.

Discussion:

The results show significant improvement in symptoms and feeling better. The
Collective results show a dramatic benefit to the SCIO therapist visit.
