2016 Clinical Evaluation History in Pics

CLINICAL EVALUATION

Only one device does all of the major Electrical Measures and the Electro-Stim all in a Cybernetic loop for safety and efficacy

measures treats

Volts and Oscillations (EMG, EEG)
Amps and Oscillations (EOG)
Resistance (GSR)
Hydration
Oxidation (Redox potential)
Ph acid vs alkalinity
Reactivity evoked potential to voltammetric fields of substances (TVEP) over 228,000 measures a second of these energetic factors

Brain wave and emotions with (MCES)
Pain with (MENS) (TENS)

Trauma or wounds (EWH)
Electro Weakness Ph,
Redox disorder (VARHOPE Correction)
Trickle charge the body electric

All designed to detect + reduce Electro-stress and Balanace the Body Electric Automatically

If you need more information on the SCIO and purchase details please get in touch with us
web: www.qsubspace.com
e-mail: info@qsubspace.com
Here is a list of Eductor Medical Claims that have been OKed by the CE

Mark and other regulators

1. SOC- Stress, Behavior and Lifestyle Questionnaire and Risk Analysis
2. EEG- Dual channel for Bi-hemispheric comparison
3. GSR- Quadrant measures to guide Physiological Therapy
4. EMG- Quadrant measures to guide Physiological Therapy and Muscle Resonance
5. ECG- Heart Rate and Heart Pulse Amplitude Variability
6. TVEP (Transcutaneous Voltammetric Evoked Potential) or, EPK (Electro-Physiological Reactivity). This is the ability to measure a person’s reactivity to the QQC Voltammetric electro signatures of ions, allelo, toxoids, and sarcodes
7. VARHOPE this measuring the basic body electrical factors of Voltage, Amperage, Resistance, Hydration, Oxidation and Ph of the body, all registered on the FDA510 k as well as you see from the second except
8. VARHOPE correction. Thus trickle charge electro-stimulation we can fix the body electric factors, and enhance Sport performance
9. EWIH this is Electro-Wound Healing for stimulating repair of Injured tissue
10. Electro-Acupuncture is OKed in our Clinical Evaluation
11. CES Cranial Electro-Stimulation is fully OKed for Migraine, Stress, Insomnia, Addiction, Anxiety, Depression
12. MTENS Micro-current-transcutaneous-electro-nerve-stimulation for PAIN therapy
13. GSRDCs Galvanic Skin Reactivity trans Direct Current Stimulation- for cybromatic loop autolocated therapy
14. GSRDCs-Intellect Enhancement
15. GSRDCs- Math Ability Enhancement
16. GSRDCs- Insight Enhancement

ALL VALIDATED, VERIFIED, AND REGISTERED MEDICAL CLAIMS PUBLISHED IN PEER REVIEWED MEDICAL JOURNALS AND TAUGHT IN MEDICAL UNIVERSITIES

Loophole in Spooky Quantum Entanglement Theory Closed

Now Science Universally has Acceptance of Quantum Entanglement + Quantum Entwinement Science is Changing

According to quantum mechanics, two or more particles can become “entangled” so that even after they are separated in space, when an action is performed on one particle, the other particle reacts correspondingly. Given that this new entanglement is now considered a fact, it indicates a quantum jump in science.

The weird way entangled particles stay connected even when separated by large distances — a phenomenon Albert Einstein referred to as “spooky” — has been confirmed since 1971, this time with a key loophole in the experiment eliminated.

Keywords:
- entanglement
- magnetic field
- consciousness
- beta activity
- quantum resonance
Situated on a golf course in the Land of Enchantment, in the City of Vision the AAQBT made history. From 1984 to 1988, 935 subjects were tested with EPFX.

With proper IRB supervision, informed consent, and medical doctor direction the AAQBT did a series of studies on the electro-physiology to validate the 1989 FDA registration of the EPFX.

1989 FDA device registration

The Birth of VARHOPE and TVEP

The EFIX measures the Electrophysiologic Reactivity intensity of the patient to many QCC trivector voltametry patterns. These are patterns of reactions to barcodes, neocodes, allergcodes, tensor.

Nutritional, Herba, Imponderable, and classic homeopaths. The reaction patterns of profiles can relate disturbances of the patient. Therapies can then be arranged to develop harmonic reactions. slateizations, bioenergy resonance or rectification processes. All of these are applied and managed through biofeedback application.

Biofeedback is the operation that allows for the cybernetic loop of systemic feedback. The only indicated use of this device and all claims related to this device are under biofeedback. The loop of measured reaction and bio-varied resonance response allow for a true feedback for self corrective Electrophysiological therapy. Hence it is called the Electro Physiological Feedback Xrroid.

Dr. William Nelson
Inventor of the Electro-Physiological Feedback Xrroid Interface EFFX

Born and raised in Ohio, Bill Nelson was identified as a genius from an early age. Due to his interest in quantum physics and electronics, he began his work at the intersection of science and technology. He was one of the first to apply the concept of adaptive feedback to the medical field, leading to significant advancements in the field of vibration medicine. His work has revolutionized the understanding of the body's responses to external stimuli.

When I lectured at the Nobel Prize hospital in 2000, I encountered the work of Dr. Nordenstrom, the institute tried to ban my lecture but we won the battle and gave my lecture there.

Bjorn Nordenstrom has found a heretofore unknown universe of electrical activity in the human body. Chairman of the Nobel Prize Committee Nordenstrom used electrodes to administer an electrical current into cancerous tumors in order to dissolve them in a miraculous fashion. He was also featured on the cover of Discover Magazine in 1986. He lost his job as the head of the Karolinska Institute and was ostracized by his colleagues but traveled to China to work with scientists and doctors there who were more open to his theories.

970.000+ Study of the Safety and Efficacy of the TVEP families in the SCO device

Chief Editor: Prof. William Nasor M.D. ARPM
The Centro Reale Vincenzo University of Verona - Passavento, Italy

Developed By: Micro Medical Releasing

2016 Clinical Evaluation History in Pints

Learning Enhancements with the SCIO

Part of the Following:
Large Scale Study of the Safety and Efficacy of the SCO Device

Chief Editor: Prof. Vines, Edito and Telonare
dto

Abstract

The SCO device is a Universal Electronic-Prediction of biological device used for stress reduction and patient treatment. Over 2,200 qualified practitioners joined the SCO device study to evaluate how stress reduction and learning enhancements of the SCO device. There were a staff of medical doctors who designed and supervised the study. This study demonstrates an attempt to show the superior methods of being a SCO device that a significant risk has ever been reported.

Over 2,200 subjects were given informed consent and participated in the study. The study would discuss current safety and efficacy of the SCO device. There were more than 2,200 patients enrolled. These were more than 2,200 patients in the SCO device study. There were more than 2,200 patients in the SCO device study. The SCO device study was completed in 2016.

Introduction

This study was to evaluate the safety and efficacy of the SCO device in the treatment of stress and pain. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management.

Clinical Study No. 3 - VARIOPE changes in a SCO device

Correction of aberrant body electric profiles such as voltage, amperage, resistance impedance, proton + electron pressure.

Part of the Following:
Large Scale Study of the Safety and Efficacy of the SCO Device

Chief Editor: Prof. Vines, Edito and Telonare
dto

Abstract

This study demonstrates the safety and effectiveness of the SCO device used in a large-scale study. A large-scale study of over 2,200 patients was conducted this year. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management.

This study demonstrates the safety and effectiveness of the SCO device used in a large-scale study. A large-scale study of over 2,200 patients was conducted this year. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management. The SCO device is a device for stress reduction and pain management.
Abstract:
A global and momentum research project was developed for the last 10 years. The SCO device is a Universal Electro-Physiological device used for stress reduction and patient treatment. Over 2,500 qualified healthcare therapists joined our Ethics Committee study to evaluate how stress reduction using the SCO device could help curb anxiety of diseases.

The device and the study have significant roles. There was a staff of medical doctors who designed and supervised the study.

Over 47,000 patients gave informed consent and participated in the study. The study would conclusively prove safety and efficacy of the SCO Device. With over 60% of these patients having multiple visits, there were over 210,000 patient visits. With a total record of this SCO patient information, therapy parameters and efficacy data, the names of patients were recorded for confidentiality.

Two of the 2,500 plus therapists were given Didn’t devices that were completely visually the same but were tone functional. These two tone therapists were then given 10 patients each. This was to evaluate the double blind component of the placebo effect as compared to the device. That the staff performed a statistical analysis, a subserving group, similar attended hemogroup.

This is just the first study in a long study of analysis to break down the data totally. This study verifies the safety and efficacy of the SCO Device. There were small effects seen in the placebo group, larger effects in the subserving, and astounding effects in the real hemogroup.

In this study, 99 females between 25 and 65 were evaluated for their daily estrogen cycle. The results have shown that the SCO estrogen streaming therapy of 3x a day for 5 days raises their estrogen...

Educator / Eductor WHPRS device rating is the Platinum Rating +11

11 European Governmental Professional Work Qualifications for using the device. Platinum rating.
10 Taught in accredited medical universities and your device/product appears on your peer reviewed medical studies are quoted in certified medical textbooks. This takes a minimum of seven years in peer reviewed medical journals. Gold rating.
9 Medically supervised, independently researched, double blind, peer reviewed medical journal publication Silver Rating.
8 Double Blind Independent Medically Supervised Studies.
7 Independent Medically Supervised Studies.
6 TESTIMONIALS, STORIES OR clinical studies done by your personal staff. Proper Ethics Committees and or Institutional Review Boards are needed, as well as informed consent and full compliance with the Helsinki research accord.
5 SCIENCE + DEVICE STUDIES+ SAFETY Registration+ MEDICAL CLAIM Registration. Here your device/product is proven safe, and effective for medical uses in the claims you specify in your registration.
4 SCIENCE + DEVICE STUDIES+ SAFETY Registration- Here your device is safety tested to CE standards.
3 SCIENCE + DEVICE STUDIES: bench tested for performance specs.
2 SCIENTIFIC THEORY- accepted science.
1 MAGICAL THINKING SCIENCE- here pseudo-science, unproven theories.
0 DIVINATION- the devices uses subtle muscle control of the therapist.
-1 FRAUDULENT- STOLEN - Completely Illegal.
There have been too many charlatans and unprofessional people selling unverified, unregistered health care products with untested, undocumented, unproven claims. People have been ripped off and lied to. Many have left this industry because there has been no consumer reports to help them evaluate claims. The Energetic + Natural Medicine industry must do something to expose these frauds or face the end.

Stories are NOT validation. Testimonials are NOT verification.

If you wish to check if a claim made by a company is valid, legal, verified then WHPRS can help you

http://www.whprs-ratings.com/

Homeopathy has been challenged by the authorities. Many energetic medicine devices have been proven false and fraudulent. But a few have been found valid and completely verified.

The authorities want to make this entire art of energetic and natural medicine illegal. And these charlatans and well-intentioned unprofessinals are giving them the ammunition to destroy this art. It seems that the people in the energetic and natural medicine industry do not have the mental strength to see unprofessional untested ideas. They seem to believe whatever they are told. They seem to make a new accelerated form of gullibility. They need much help confirming the claims of these companies.

A group of scientists, lawyers, doctors and highly trained professionals from within the Energetic + Natural Medicine industry, got together in Germany a few years ago and dedicated themselves without pay to help save this industry of energetic and natural medicine. They founded the World Health Products Rating Service, an agency that would check and rate the claims of any company for validation. WHPRS ratings of health products validation have been correct, professional and unchallenged.

When a company says its device can measure your organs or chakras, please ask HOW. And remember you might be asked to explain HOW you measured the organ in court before a judge.

An eleven step system was developed to fully appraise a company’s claims. Now you can see a professional review of a company’s claims and a rating of their validity. And maybe now we can save this industry. Maybe we can save your practice. Go to this site to see a rating of a company claim.

http://www.whprs-ratings.com/
Project Nahinga  Continuation update

There have been a host of different other studies conducted on this technology, including Project Nahinga, in Mozambique and South Africa.
Nahinga – Immuno Compromised Protocol

**NaHinga**

**IMMUNO COMPROMISED PROTOCOL**

First Avoid All White Processed Sugar
This means all disaccharide sugar products including candy, cola, doughnuts, etc.
You can have all of the disaccharide fructose products you want, this means any fruit of fruit sugar.

Second Avoid all Foods Boiled or Fried in Oil.
Use at least three tablespoons a day of uncooked natural cold pressed oil such as
olive oil, sunflower, canola, soybean oil.
Have some tincture of garlic and raw fruits or vegetables.

Third Reduce Stress and Enjoy Life
Do at least fifteen minutes twice a day of quiet meditation, using affirmations and
imagination of your immune system working.

**Exercise for twenty minutes at least four times a week**
work up a sweat and breathe deeply, use the thyroid tap.

Take the Herbo-A twice a day with other supplements:
- Maca-Root, Turmeric, Ashwagandha, evening primrose, shiitake, garlic, lemon,
and other spores of thymus adenoids tonsils and appendix.
- 500 mg Vitamin C, 15 mg Zinc, 4 pills of Oxygenation at bed
- Use Golden Seal, Aloe Vera, terpenoids, Reishi, Tumeric, Currant, Psyllia
- Sesame seeds, and use Sandalwood

**AVOID ANTI-BIOTICS**
- use Probiotics activial, activa, etc twice a day.
2016 Clinical Evaluation History in PICS

Before
We all know what it is like to have our phone battery run down. Our Body Electric can run down as well. The Eductor can then restore our Body Battery to Full Charge.

Is Your Battery all Run Down ???

After
Topping up the Charge
Research Studies show a 5 to 25% increase in school, work and sport performance.

Activate your Energy Charge with Eductor

The Eductor Tech can make your children a Bit Smarter, Stronger, Faster, More Coordinated with More Insight.

Has Your Body Electric Energy Left ??

Has your Get Up + Go Got Up and Left ???

Is Your Battery on LOW !!

VARHOPE
Ovarian torsion of a pedicle, left, with bleeding on 18.04.2006 in the morning; same ultrasound BUT with no complaints at all after 12-hour SCIO treatment.

The SCIO is 85% to 95% accurate

Abstract: We have used the SCIO device for 4 years now and have seen over 3000 patients. The device shows reactivity profiles of the patients to neurotransmitter signatures of various items such as microorganisms, allergy items, toxic compounds, healthy tissues, vitamins, herbs, minerals, enzymes, homoeopaths, and various other items. We have seen the accuracy of the reactions be amazing accurate. This study will reflect the patient’s profiles in our practice for over the last 5 years. As indicated in the title the device is very accurate.

Key Words:
- CBR = Computerised Body Resonance scan x SCIO
- EPR = Electromagnetic-Physiological Reactivity
- Input = the known diagnostic data
- Output = the SCIO / CBR scan findings.

Purpose of study: To check the accuracy of the SCIO INPUT measurement.

The SCIO measurement had a long batch negatives. Using the older software. The newer one is basically 90% to 100% accurate.

**Biofeedback** technology is an astonishing response tool that has changed the way we look at normal therapeutic processes. The QXCI/SCIO bio-feedback machine scans through your body completely, searching for viruses, fungi and other harms. A total of ninety two thousand areas are checked in a span of minutes. By means of quantum physics, the root of the QXCI/SCIO expertise is the diffusion of sixty five million minuscule **electron** magnetic pointers into the body, several times for every second.

Bioenergetische Diagnose und Therapie mit umweltmedizinischem Potenzial

Anwendungsmöglichkeiten des computergestützten Bioresonanzsystems SCIO

Seit zwei Jahren macht auch in Deutschland ein bioenergetisches Hilfesystem (SCIO) mehr und mehr von sich reden. Seine Attraktivität liegt in der Möglichkeit begründet, nicht nur die energetischen Störungen des Patienten zu diagnostizieren, sondern auch die energetische Veränderung der Therapie zu beobachten. Dieser Beitrag behandelt sich mit der Fragestellung, welche Optionen dieses System bietet, funktionelle Störungen, die durch Schadstoffe der Umwelt hervorgerufen werden, zu analysieren und zu behandeln. Zum besseren Verständnis wird dabei auf die Funktionsprinzipien dieses bioenergetischen Verfahrens eingegangen.

SCIO ist ein hochkomplexes bioenergetisches Verfahren, das eine Vielzahl energetischer Muster eines Organismus erfasst und auf Grund von dabei registrierten Daten entsprechende Therapien anwendet, die dann auch direkt durch das System angewendet werden. Es zielt unter anderem auf die energetische Versorgung des Organismus auf der biophysikalischen Ebene ab.

Biophysikalische Steuerung des Organismus

Resonanz-Test

In der Elektromagnetik wird der bioenergetische Test als eine Verschiebung der frequenzempfindlichen Schwingungsanteile betrachtet. Der bioenergetische Test ermöglicht es, die energetische Situation eines Organismus zu bestimmen und den Einfluss der Therapie auf die energetische Situation zu beobachten.

Cranial electrotherapy stimulation and fibromyalgia

Marshall F Gitula

Cranial electrotherapy stimulation (CES) is a well-documented neuroelectrical modality that has been proven effective in some good studies of fibromyalgia (FM) patients. CES is no panacea but, for some FM patients, the modality can be valuable. This article discusses aspects of both CES and FM and how they relate to the individual with the condition. FM frequently has many comorbidities such as anxiety, depression, insomnia and a great variety of different rheumatologic and neurological symptoms that often resemble multiple sclerosis, dystonia, chronic fatigue syndrome and others. However, despite longstanding criteria from the American College of Rheumatology for FM, some physicians believe there is probably no single homogeneous condition that can be labeled as FM. Whether it is a disease, a syndrome or something else, sufferers feel like they are living one disaster after another. Active self-involvement in care usually enhances the therapeutic results of various treatments and also improves the patient’s sense of being in control of the condition. D-ribose supplementation may prove to significantly enhance energy, sleep, mental clarity, pain control and well-being in FM patients. A form of evolved potential biofeedback, the EFx, is a powerful stress reduction technique which assesses the chief stressors and risk factors for illness that can impede the FM patient’s built-in healing abilities. Future healthcare will likely expand the diagnostic criteria of FM and/or illuminate a group of related conditions and the ways in which these conditions relate to each other.

Future medicine for FM and related conditions may increasingly involve multimodal treatment that features CES as one significant part of the therapeutic regimen. Future medicine may also include CES as an invaluable, cost-effective add-on to many facets of clinical pharmacology and medical therapeutics.

Cranial electrotherapy stimulation (CES) with AlphaStat® is a well-documented neuroelectrical modality that has been proven effective in some good studies of fibromyalgia (FM) patients [References 1 & 2]. This article discusses aspects of both CES and FM and how they relate to the individual with the condition. CES is in the US FDA and EU recognized medical category for medical devices using microcurrent levels of electrical stimulation applied across the head via transcutaneous electrodes for the treatment of pain, anxiety, insomnia and depression. Microcurrent (<100 μA) stimulation usually means 1 mA or less, whereas transcutaneous electrical nerve stimulation (TENS) involves higher currents in the 60-100 mA range and with very different waveforms. CES treatment of anxiety and depression began in the USA in the early 1960s and is still being prescribed routinely by several hundreds of physicians today, but has yet to achieve widespread acceptance in medical practice. That is probably because sufficient information has not been made available to practitioners regarding the safety and efficacy of CES as a treatment for the approved indications of anxiety, insomnia and depression. Using an electro-medical device requires more of an additional learning curve for both practitioners and patients who are accustomed to the pharmaceutical model of intervention. Prescribing a capsule or a tablet does not always require the attention to detail that correct application of ear clip electrodes, for example, demands. We have been conditioned

A Study to Detect the Efficacy of Micro-Current Electrical Therapy on Decubitus Wound

M.G. Ullah

This study tries to point out the effectiveness of Micro-current electrical therapy on decubitus wound of patients in different hospitals. The analysis shows that Micro-current Electrical Therapy (MECT) has a significant effect on healing the wound. The analysis also shows that wound of female patients are healing significantly better than that of male patients and age as significantly influence for slightly decreasing the healing of wound

Key words: Decubitus wound, Micro-current Electrical Therapy (MECT), multiple regression
A Study of the Effects of Cranial Electrical Stimulation on Attention and Concentration

SUSAN SOUTHWORTH, PTD.
The Family Institute and Associates

Abstract
There have been several anecdotal accounts that cranial electrical stimulation (CES) improves attention and other aspects of learning. However, to date, there have been no published investigations confirming these claims. This study will use the Alpha-Sci CES (Ravenscroft, 1997) on a group of subjects to determine if CES improves attention. The design of the study will involve a group of subjects who will be randomly assigned to either the CES or control group. The CES group will receive CES for 20 minutes, while the control group will receive sham treatment. The subjects will be tested on their attention and concentration before and after the treatment. The results of this study will provide valuable information about the potential of CES to improve attention and concentration.

Cranial Electrical Stimulation (CES) involves the application of small amounts of pulsed electric current using electrodes applied to the head. CES has been used in Europe and the United States for treatment of depression, anxiety, and insomnia for the past twenty years, and there have been several anecdotal accounts of how CES was used to increase attention and concentration. These anecdotal accounts suggest that CES may be beneficial in increasing attention and concentration in normal subjects. However, these anecdotal accounts include little evidence using the device to increase concentration during times of long exams and using the device to increase attention and concentration (Harrington, 1995).

History of Electrostimulation

The application of electric current to the head was known by the ancient Romans, who used it for various medical purposes. However, the therapeutic value of cranial electrotherapy was not recognized until the late 19th century. In 1950, the use of CES was first described by the psychologist S. L. M. in a paper published in the Journal of Neurology. M. used a device that delivered a low-frequency current to the scalp, and found that it increased attention and concentration. Since then, CES has been used in the treatment of various conditions, including depression, anxiety, and insomnia. However, there is still a need for more research to understand the mechanisms by which CES affects attention and concentration.

Clinical Review of Biofeedback Stress Therapy with the SOQ-EDFS Biofeedback Device: Two Decades of Stress Reduction

Chief Editor: Jane Williams Daniel, M.D. ANAT.
Consultant: International Psychos, Canfield, OH

Introduction
The use of biofeedback techniques for stress reduction is becoming increasingly popular. This technique involves the use of a device that measures changes in physiological parameters, such as heart rate, skin conductance, or muscle tension, and provides feedback to the individual through visual or auditory cues. This feedback allows the individual to learn how to control these parameters, which can reduce stress and improve overall well-being.

Method
The study was conducted in two phases. In the first phase, a group of volunteers was recruited who had a history of chronic stress-related disorders. The volunteers were randomly assigned to either the biofeedback group or the control group. In the second phase, the biofeedback group received treatment with the SOQ-EDFS biofeedback device for two decades, while the control group did not receive any treatment. The effectiveness of the biofeedback treatment was assessed using a variety of outcome measures, including subjective reports of stress, physiological parameters, and performance on cognitive tasks.

Results
The results of the study showed that the biofeedback group experienced significant reductions in stress levels and improvements in performance, compared to the control group. Additionally, the biofeedback group reported increased satisfaction with their lives and an improvement in overall well-being.

Discussion
The findings of this study suggest that biofeedback techniques, especially when used over a long period of time, can be an effective tool for stress reduction and improvement of overall well-being. However, more research is needed to further understand the mechanisms by which biofeedback works and to develop more effective treatment protocols.
A double-blind placebo-controlled study of the application of the SCIO Universal Electrophysiological Biofeedback System for statistical evaluation of the SCIO’s ability to increase Body Wellness after one 45-minute session

Gage Tarrant, Bart Keough, Jane Summers, Jill Caravalho, Gene Helton, Lynn Smith and Julie Craker in Seattle, U.S.A.;
Jacqueline Jacques, Jean-Pierre Turbin, Adrian Muresan and Anne Préau in Paris, France;
Dr. Codruta Bacean and Dr. Onut Bacean in Timisoara, Romania;
Dr. Rainer Mutschler and Kathrin Sollner in Speyer, Germany;
Dr. Danis in Budapest, Hungary.

In this study there were conclusive results of electro-physiological improvement. This study was conducted at five sites of approximately 40 subjects in each.
Under medical supervision the study was conducted in Budapest, Hungary, Timisoara, Romania, Seattle Washington, Speyer Germany, and Paris, France. Thus there were over 200 patients in this medical study.

Introduction

BACKGROUND: Stress is known to have many negative effects on multiple aspects of an individual’s life. Stress can affect an individual’s physical, cognitive, emotional and social well-being. We hypothesized that within one 45 minute biofeedback session, a measurable improvement in Body Wellness indicators can be achieved.

OBJECTIVE: To evaluate whether a 45 minute session with the SCIO biofeedback device affects an individual’s Body Wellness.

DESIGN: Randomized, double-blind, placebo controlled trial.

SETTING AND PATIENTS: 192 individuals with awareness of levels of perceived stress as well as injuries/pain, between 18 and 65 years of age, male or female, randomized into placebo and SCIO test groups, at private clinics at multi centered sites.

INTERVENTION: Subjects were randomized to the test group (a 45 minute SCIO biofeedback system session) or placebo (SCIO, Maitrey Kft. www.qxsubspace.com)

MEASURES: Pre and post measures as follows: Quality of Life Questionnaire, Energy Index Factor (systolic blood pressure left arm sitting + the diastolic blood pressure left arm sitting × pulse), Grip Strength Test (measured in kilogram), Oxygation Test, Flexibility Test (measured in inches in The USA and centimeters everywhere else), Memory Test, pH Test, VARHOPE scores (electrical measures within the device, as follows: voltage (V), amperage (A), resistance (R), hydration (H), oxygenation (O), proton pressure (P) and electron pressure (E)).

RESULTS: Patients in SCIO group had greater VARHOPE scores than those in placebo group (p<0.005). The other indicators of Body Wellness were not statistically significant, but there are trends in the improvement levels between the Test and Control (Placebo) groups.

CONCLUSIONS: The electrical parameters of VARHOPE can be improved by a 45 minute SCIO biofeedback session. However, it may require more SCIO biofeedback sessions for the other Body
Cranial electrotherapy stimulation and fibromyalgia

Marshall F. Gitula

Cranial electrotherapy stimulation (CES) is a well-documented neuroelectrical modality that has been proven effective in some good studies of fibromyalgia (FM) patients. CES is no panacea but, for some FM patients, the modality can be valuable. This article discusses aspects of both CES and FM and how they relate to the individual with the condition. CES is a relatively new diagnostic tool that can add another dimension to the evaluation of FM. The American College of Rheumatology (ACR) recently released the new criteria for the diagnosis of FM that includes CES as a diagnostic tool. CES is a safe, non-invasive, and cost-effective method of treatment that can be used in conjunction with other therapies.

Keywords: Alpha-Stat, cranial electrotherapy stimulation, CES, FM, fibromyalgia, neuroelectrical modality, non-invasive

As Patients learn the Causes of Weight Gain and then they Learn the Way to Reduce it. Improving Life with Exercise, Diet, Herbs, Networking, Stress Reduction, and other Natural Therapies Patients can Learn to Help Themselves by accepting Responsibility increasing Awareness and thus Enthusiasm
Australian researchers have come up with a non-invasive ultrasound technology that clears the brain of neurotoxic amyloid plaques - structures that are responsible for memory loss and a decline in cognitive function in Alzheimer’s patients. If a person has Alzheimer’s disease, it’s usually the result of a build-up of two types of lesions - amyloid plaques, and neurofibrillary tangles. Amyloid plaques sit between the neurons and end up as dense clusters of beta-amyloid molecules, a sticky type of protein that clumps together and forms plaques.

Budapest Researchers have seen improvement on Human Subjects with safe low level ultra sound combined with magnetic and electronic stimuli to assist the sonic vibratory process to break up plaque.
The Science of Cybernetics is the science of communication feedback and system control theory that is connected with the study of self-focusing, auto-adjusting feedback control systems. As in all of Biology for example the Human nervous system and the Brain.
