The butterfly effect refers to a concept that small causes can have large effects. Initially, it was used with weather prediction but later the term became a metaphor used in and out of science.\[1\]

In chaos theory, the butterfly effect is the sensitive dependence on initial conditions in which a small change in one state of a deterministic nonlinear system can result in large differences in a later state. The name, coined by Edward Lorenz for the effect which had been known long before, is derived from the metaphorical example of the details of a hurricane (exact time of formation, exact path taken) being influenced by minor perturbations such as the flapping of the wings of a distant butterfly several weeks earlier. Lorenz discovered the effect when he observed that runs of his weather model with initial condition data that was rounded in a
seemingly inconsequential manner would fail to reproduce the results of runs with the unrounded initial condition data. A very small change in initial conditions had created a significantly different outcome.

The idea, that small causes may have large effects in general and in weather specifically, was used from Henri Poincaré to Norbert Wiener. Edward Lorenz’s work developed the concept of instability of the atmosphere to a quantitative foundation and linked the concept to the properties of large classes of systems undergoing non-linear-dynamics and deterministic chaos theory.[1]

The Electro-Physiological-Feedback-Xrroid is a biofeedback system. The definition of biofeedback is measuring a physiological response and feeding it back to the patient. Most of the devices feedback the information primarily to the conscious and thus then to the unconscious of the patient. The EPFX-SCIO system differs in that it feeds back the information or signal to the unconscious primarily and conscious secondarily. The unconscious can then direct these autonomic processes. So our device focuses on repairing the unconscious link of mind body directly.

Feedback of electro physiological processes are given as relaxation signals to the patient. The EPFX system measures a combination of the following physiological functions, voltage potential, current potential, skin resistance, Electro Physiological Reactance, Electro Physiological Susceptance, skin temperature and Frequency. These are the raw readings made at the extremities and the head harness. (see Diagram). The EPFX system applies a variant set of signals and then measures changes in the readings. The changes determine resonance, reactivity and coherency.

The QQC is a proprietary process that does an analysis of the Polographic or voltammetry three dimensional electrical pattern of a substance. This produces a substance electronic signature field. The Fields of these substances are sent into the patient via the harness. These variant patterns are of 0 Hz to 25,000 Hz and of variant wave forms. The total current is never over 5 milliamps. The patient is evaluated before and after stimulation to measure any EPR changes that show patient reactivity. The type intensity and style of reactivity EPR offers insight into the patient health. Types of item reacting can be a link to therapy or deeper diagnosis.

The EPFX measures the Electro-Physiologic Reactivity intensity of the patient to many QQC trivector voltammetry patterns. These are patterns of reactions to Sarcodes, Nosodes, Allersodes, Isodes, Nutritional, Herbals, Imponderable and Classic Homeopathics. The reaction patterns or profiles can relate disturbances of the patient. Therapies can then be arranged to develop harmonic reactions, desensitizations, biological resonance or rectification processes. All of these are applied and managed through biofeedback application. Biofeedback is the operation that allows for the cybernetic loop of systemic feedback. The only indicated use of this device and all claims related to this device are under biofeedback. The loop of measured reaction and bio-varied resonance response allow for a true feedback for self-corrective Electro-Physiological therapy. Hence it is called the Electro Physiological Feedback Xrroid.
The work of Dr. Nelson in his landmark treatise 'The PROMORPHEUS', has broken down the science to it’s basic form, consciousness. The extra-Dimensional theories were tested and proven by Nelson to develop a living system model. The trivector voltammetry system measures the voltage, amperage, resistance, frequencies, etc to calculate the inductance, capacitance, resonance and conductance of the reactive system of the body over time. All done in the strict confines of biofeedback. Thus we can calculate and model the mind body connection from these multi dimensional factors. The quantic nature of the biological system allows for the interface of the digital computer.

The scientific theories behind this device are contained in the multi pages of the PROMORPHEUS³, written in 1982. FDA registered from 1989.⁴

The word doctor comes from the Latin word "EDUCTOR" or teacher. A doctor should be a teacher, thus education is a must for medicine.

True medicine should be holistic medicine. Medicine is based in responsibility. Separation from a cause of disease is the responsibility of the diseased patient. If there is a cause of disease in your environment you can choose to change or reduce the cause, move to a new environment, or accept the conditions. Responsibility for healing is with the patient.

Many of the causes of disease that approach us are beneath our conscious awareness. Our unconscious is much more aware of the disease causing factors that come at us. Our unconscious reacts with subtle energetic changes in electrical bodies. The EPFX device is the first energetic medicine device to test reactions where the patient and doctor both do not know what is being tested. Thus the unconscious of the patient causes the reactions. The reactions are not picked by the computer, not picked by the unconscious of the doctor as with point probes or kinesiology, but the results are picked by the unconscious of the patient.
