In early Rome they put Electric Rays (order Torpediniformes) onto the head of depressed and weak patients. In ancient Greece the Electric Ray (Greek word NARKE) was used to sedate pain. The Narke was used in surgery and on headaches to lessen pain. This is how we got the word NARCOTIC.

The Word NARCOTIC comes from the Greek word NARKE which is the word for the Electric Ray.
As early as 1794, Aldini had evaluated the effect of galvanic head current on himself, and by 1804, he had described the positive treatment of patients suffering from melancholia. Research continued through the early 20th century; yet because non-feedback DC induced variable results, or sometime none at all, the use of unmonitored low-intensity DC (i.e., one way tDCS) was gradually forgotten.

Between 1938 and 1945, then led to an interest in the application of AC at lower intensities with the first study of “cranial electro-therapy stimulation” (also known as “electrosleep”) published by Anan’ev and others in 1957… Since the 1960s, a series of studies with low-intensity AC stimulation have been published, and cranial AC stimulation devices have become commercially available for personal use.
During tDCS, low-amplitude direct currents penetrate the skull to enter the brain. Although there is substantial shunting of current at the scalp, sufficient current penetrates the brain to modify the transmembrane neuronal potential and, thus, influences the level of excitability and modulates the firing rate of individual neurons. DC currents do not induce action potentials; rather, the current appears to modulate the spontaneous neuronal activity in a polarity-dependent fashion: For example, anodal tDCS applied over the motor cortex increases the excitability of the underlying motor cortex, whereas cathodal tDCS applied over the same area decreases it. Similarly, anodal tDCS applied over the occipital cortex produces short-lasting increases in visual cortex excitability. Hence, tDCS is believed to deliver its effects by polarizing brain tissue, and although anodal stimulation generally increases excitability and cathodal stimulation generally reduces excitability, the direction of polarization depends strictly on the orientation of axons and dendrites in the induced electrical field.

By making a complete body harness not just a head harness the GSRtDCs of the SCIO/Eductor has a holistic total body effect. This is much improved over the old head harness with no measurement of response. Now the current is swept through the whole brain system not just one hemisphere to another. The whole body effect allows us the measure ECG, Quadrant EMG, TVEP-EPR, and holistic VARHOPE changes. The reactivity of the system to a stimulus allows us to modify the stimulus. We can modify the frequency, amplitude, wave form, point of entry, point of reception, and many other variables designed for total safety and maximum efficacy of the treatment.

Old style Non-Autofocussed CES is non-standardized and often unclear unmonitored method of sending cranial AC stimulation; indeed many studies quote the method of stimulation just as “cranial electrotherapy stimulation” without recognizing the specific site or other parameters of stimulation (e.g., duration, current density, wave form, frequency, intensity, electrode size) calling into question existing reviews of this method. Still, CES has been suggested to be effective in the treatment of anxiety, depression, stress, and insomnia, and the subsequent parameters of stimulation have been reported: frequency (0.5 Hz to 167 kHz), intensity (100 μA to 4 mA), and duration of stimulation (5 min to 6 successive days). The fractal nature of the human body would respond better to a changing “organic type” signal.
Stimulating the brain with high frequency electrical noise TRNS (transcranial random noise stimulation) was then shown to supersede the beneficial effects observed from tDCs (transcranial direct current stimulation), either anodal or cathodal (as well as those observed from sham stimulation), in perceptual learning, as newly reported by Fertonani, Pirully & Miniussi in the Journal of Neuroscience. The authors suggested that transcranial random noise stimulation may work by preventing those neurophysiological homeostatic mechanisms that govern ion channel conductance from rebalancing the changes induced by prolonged practice on this perceptual learning task.

So from the use of electric rays we saw, CES (Cranial Electric Stimulation), transcranial random noise stimulation lead to tDCs (transcranial direct current stimulation), then TRNS (transcranial random noise stimulation) and of the mechanisms of brain performance enhancement. But these techniques lacked one very critical aspect. They all failed to have a measurement in the treatment loop.

The telephone worked better when there was feedback. The thermostat in your room is an example of a feedback mechanism that turns off the heater when there is too much heat. All things work better with a feedback mechanism. We started using GSRtDCs for brain stimulation in 1985 studies. Now safety was much more assured when we can turn off and or modify a signal when there is an alarm reaction from the patient. Also the efficacy is greatly increased from a cybernetic feedback loop.

GSRtDCs has been developed with a 30 year history of a cybernetic feedback loop and a trained licensed monitor therapist to assure safety and efficacy. All such cranial stimulation from electric ray, TRNS, tDCs, CES etc can trigger a vaso-vagal response in the subject. This might lead to nausea and maybe even fainting. A trained therapist can prevent and or assist recovery from such an event.

Osmosis stimulation, Biochemical changes, neurotransmitter and endorphin release all seem to be enhanced. An autofocused cybernetic feedback loop dramatically increased safety and efficacy. Several studies propose that AC stimulation may be related to changes in neurotransmitters and endorphin release. In this context, sub-threshold stimulation induced by AC stimulation would indeed cause significant changes in the nervous system electrical activity. But a way of instantaneous real time feedback could make the system work better. So we needed to make a cybernetic feedback loop to measure the reaction to a stimuli to alter and make the next stimulus more safe and efficacious.

In 1973 we started doing the initial research on the body electric including GSRtDCs. We used old style polygraphs and EEG devices to measure body processes such as EEG, ECG, EMG, and GSR. The first research project showed an ability for meaningful others to communicate at a distance when
stimulated. We review the history of our professional credentialed research in the following clinical evaluation and video.

We did a large extensive research project over several years from 1973 till 1987 where we evaluated several factors of the body electric including the effects of GRStDCs. We found that measuring the DC GSR of the forehead with a small electrical current there was a positive effect on the cognition. Much like a cup of coffee the cranial DC GSR stimulus had stimulation. This led to our 1988 study on the positive effects on learning. The 900 plus vast group of studies performed and or collected by the Academy of Applied Quantum Biotech opened the door to getting our USA FDA 510k registration for our biofeedback technologies which included GSRtDCs.

The technology has been called EPFX, QXCI, SCIO, Indigo, Eductor and has been registered in many countries world-wide. With a vast array of research published in multiple internationally recognized peer reviewed medical journals and medical university textbooks our technology has been shown to be safe and effective.

In 1989 we received our first government registration for the EPFX (Electro-Physiological Feedback Xrroid). The EPR (Electro-Physiological- Reactivity) and the VARHOPE (Voltage, Amperage, Resistance, Hydration, Oxygenation, Ph) were both part of the 1989 510k application. Also part of the registration was the ability to direct a current into the forehead to measure the GSR (Skin Resistance of the Head. This allowed for the GSRtDCs. We have been registered in over 10 other countries and after selling over 35,000 devices we have had no significant risk reports thus proving safety. And hundreds of research articles validating safety and efficacy. We are the leaders in the technology of safe micro-current stimulation of the brain and body.

In 1996 the technology was improved with the addition of a calibration process and an improved Xrroid. This led to the QXCI device first registered in Europe in 1997. Computer advances led to improved performance of the software. Many studies and continued research helped to improve the technology. In 2001 advances in computer timer chips led to the need for an internal cpu (central processing unit) to be added to the workings of the device and this was called the SCIO. See history of the SCIO.
The original tDCs therapy ran a current through the brain alone and not the body. We found the holistic signal going through the brain and wrists to the feet was far superior. We were seeking to measure the
entire body potentials and to be able to treat any and all health problems not just the brain, and in so doing we found we greatly increased the action, influence, safety and the efficacy of the treatment.

When we measured and corrected the whole body we also found we could make more global improvements not just of the intellect. Oxygenation, stamina, hydration, acid alkaline issues, eye hand coordination, osmosis, and strength were all improved with the autofocused cybernetic feedback loop technology.

The word for sport in china is TU, which means education of the muscles. And or device was registered in 1989 for muscular reeducation among other functions by the FDA. Our sport studies and research on sport issues has proven that we can make an athlete performance better.

Our research has been extensive.

**Super Learning Language Stimulation with the EPFX**

By William Nelson

Abstract: It is our hypothesis that a small DC pulsed current applied to the forehead can stimulate osmosis and thus improve synaptic action. We first use the EPFX device to measure the body electric for amperage and voltage output of dissimilar conduction materials. And once we know the body electric factors we can apply a similar signal to the body. Then we measure the electro response and use it to make the next stimulation. This makes an auto focused cybernetic loop where the body electric can guide the development of the stimulation of the synaptic function. This should be able to increase mental acuity. In 1987 we used 21 subjects ages 18 to 55 learn new words from a new language. German words were taught to the subjects while on the EPFX device. The EPFX device was set either on or off for placebo control. Subjects were taught the meaning and the pronunciation of 15 new words during a session.

In our study there was significant improvement of over 16 % in the learning skill versus Placebo. This shows the ability for the autofocusing micro-current stimulation to increase brain functioning.

Stimulation of Math Skills with an Auto-Focused Cybernetic Loop Stimulation

By William Nelson

Abstract: It is our theory that a small DC pulsed current applied to the cranium can stimulate osmosis and thus improve synaptic action. We first use the EPFX device to measure the body electric for amperage and voltage output of dissimilar conduction materials. And once we know the body electric factors we can apply a similar signal to the body. Then we measure the electro response and use it to make the next stimulation.

This makes an auto focused cybernetic loop where the body electric can guide the development of the stimulation of the synaptic function. This should be able to increase mental acuity. In this study we used 41 subjects ages 15 to 55 do a math test with the EPFX device either on or off for placebo control. The questions were of this nature: two numbers added together make 12 and multiplied by each other make 36. The answer 6 and 6 take an intuitive math skill.

In our study there was significant improvement of near 20% in the mathematical skill. This shows the ability for the autofocusing micro-current stimulation to increase brain functioning.

Abstract

It is our hypothesis that a small DC pulsed current applied to the forehead can stimulate
osmosis and thus improve synaptic action. We first use the QXCI device to measure the body
electric for amperage and voltage output of dissimilar conduction materials. And once we
know the body electric factors we can apply a similar signal to the body. Then we measure
the electro response and use it to make the next stimulation. This makes an auto focused
cybernetic loop where the body electric can guide the development of the stimulation of the
synaptic function. This should be able to increase mental acuity. In 1997 we used 25 subjects
ages 14 to 55 do a math test with the QXCI device either on or off for placebo control. The
questions were of this nature: two numbers added together make 12 and multiplied by each
other make 36. The answer 5 and 6 take an intuitive math skill.

In our study there was significant improvement of over 23 % in the mathematical skill versus
Placebo. This shows the ability for the autofocusing micro-current stimulation to increase
brain functioning.

Abstract
It is our hypothesis that a small DC pulsed current applied to the forehead can stimulate osmosis and thus improve synaptic action. This has been proven with the EPFX and OXCI technology. Now we are testing the newest advance the SCIO. We first use the SCIO device to measure the body electric for amperage and voltage output of dissimilar conduction materials. And once we know the body electric factors we can apply an electro-potential similar signal to the body. Then we measure the electro response and use it to make the next stimulation. This makes an auto focused cybernetic loop where the body electric can guide the development of the stimulation of the synaptic function. This should be able to increase mental acuity. In 2004 we used 42 subjects ages 11 to 60 learn new words from a new language. German words were taught to the subjects while on the SCIO device. The SCIO device was set either on or off for placebo control. Subjects were taught the meaning and the pronunciation of 15 new unknown words during a session.

In our study there was significant improvement of over 20 % in the learning skill versus Placebo. This shows the ability for the autofocusing micro-current stimulation to increase brain functioning.

Abstract:

The Indigo is a biofeedback device that sends a small DC pulsed current to the forehead to measure skin resistance. The Indigo can stimulate osmosis and thus improve synaptic action. This has been proven with the EPFX, QXCI and SCIO technology. We first use the Indigo device to measure the body electric for amperage and voltage output of dissimilar conduction materials. And once we know the body electric factors we can apply an electro-potential signal to the body very similar to the original body electric. Then we measure the electro response and use it to make the next stimulation. This makes an auto focused cybernetic loop where the body electric can guide the development of the stimulation of the synaptic function. This will increase osmosis and increase mental acuity to enhance learning.

In 2009 we used 35 subjects ages 11 to 45 solve math problems by subjects while on the SCIO device. The SCIO device was set either on or off for placebo control. Subjects were asked questions like two numbers added together make 8 and multiplied by each other make 16.

In our study there was significant improvement of over 20% in the learning skill versus Placebo. This shows the ability for the autofocusing micro-current stimulation to increase brain functioning.
Trans-cranial GSR Biofeedback Stimulation Increases Math, Insight and Language Memory
Eductor 2014

Supervising Researchers: Dr Klara Hilf, Prof of Medicine Desire’ Dubounet
Biofeedback Research Technician: Neményi Rita
Permission of the Hungarian Ethics Committee and the Ethic Committee of the
University of Bucharest Faculty of Psychology
Institution: International Medical University

Dates: February thru June 2014  Place: Budapest, Hungary

Abstract:
93 subjects male and female were measured for basic Math skills, Insight and Language Memory.

Three GSR Cybernetic systems were compared to a placebo group. The Indigo, SCIO, Eductor 2014 with single signal generator and double signal generator setting were compared to placebo control testing. Cybernetic autofocusing of micro-current stimulation and biofeedback correction is used to maximize the effect.

We analyzed speed, accuracy and stress during math problem solving and learning new words in a new language. Once a base-line was established, the trans-cranial GSR Biofeedback cybernetic operation was turned on. After stimulation there was a significant noticeable increase in accuracy and speed of the math and word skills. The second wave form generator performed better in the test.

Many new studies have shown the safety and efficacy of GSR trans-cranial stimulation inducing improved performance in mental acuity. These devices showed superior effect largely due to the autofocus cybernetic loop technology first developed in the 1980’s by Desire’ and first clinically proven in 2002. And proven again in several studies over the last two decades.

The technology has used a single wave form generator for CES since first registered with the US FDA in 1989. After over 35,000 such devices with not one reported significant risk, safety is obvious. Hundreds of studies have shown this technology to be effective, and now a second wave form generator will be tested.
In 1969 we landed on the moon and I worked on the navigation system for NASA as an employee of AC Electronics. We made the beryllium gyro. I theorized about the trivector nature of electronics and the body electric. I was trained to work on the punch card computer system, the IBM 360, but it had a flaw. The square root of 2 was not accurate. I used a slide rule to do the work on Apollo 13 reentry. Richard Nixon was president. Gas was 20 cents a gallon. Texas instruments made the 1st hand calculator $800.

In 1974 I did the first studies on the trivector idea with on a polygraph at YSU. Gerry Ford was president and the computer mouse was just invented. I was trained on SPSS statistics computer programing.
I developed the EPFX system in 1985-89. The FDA accepts the registration of the EPFX on Oct 13 1989 and accepts the Electro-Physiological-Reactivity (EPR) measure of nosodes, allersodes, isodes, sarcodes, and phyto substances. The EPFX had 8 channels every 100th of a sec. it was made to work on the 80-88, or an 80-386 computer which can be seen only in a museum now. We did not have internet, fax was the big thing, and a 10 Meg hard drive was considered large. Ronald Regan was president, a gallon of gas was 1 dollar, and a movie ticket was $2.50. There was an iron curtain separating Europe.
The EPFX measures the Electrophysiologic Reactivity intensity of the patient to many QCC trivector voltammetry patterns. These are patterns or reactions to Sarcoaxes, Nosodes, Alleraxes, Isodes, Nutritional, Herbs, Imponderables and Classic Homeopathics. The reaction patterns or profiles can relate disturbances of the patient. Therapies can then be arranged to develop harmonic reactions, desensitizations, biological resonance or rectification processes. All of these are applied and managed through biofeedback application. Biofeedback is the operation that allows for the cybernetic loop of systemic feedback. The only indicated use of this device and all claims related to this device are under biofeedback. The loop of measured reaction and bio-varied resonance response allow for a true feedback for self corrective Electrophysiologic therapy. Hence it is called the Electro Physiological Feedback Xroid.

Regulatory Class: II

The CE mark Class 2 registration includes European Registration

The following excerpt is from the medical claims part of the SCI CE Mark:

The SCI is indicated for use as a Universal Electrophysiological Biofeedback System. The Universal Electrophysiological Biofeedback System is made up of the following eight Universal items which are functions of the SCI:

1. Stress Reduction and Lifestyle Stressors Questionnaire;
2. Simple EEG [electroencephalography] biofeedback brain wave stress reduction;
3. Three-pole ECG [electrocardiography] simple heart awareness and biofeedback stress reduction;
4. EMG [electromyography] biofeedback for simple reeducation of muscles;
5. GSR [galvanic skin response] biofeedback and TVEP [Transcutaneous voltammetric evoked potential] biofeedback (electrophysiological reactivity);

Since GSR biofeedback requires a microcurrent voltammetric stimulation to measure GSR, then the microcurrent has the following secondary Therapeutic functions which function as performed through the biofeedback loop:

6. Microcurrent: Transcutaneous electro nerve stimulation (MENS) for pain reduction in the cybernetic biofeedback loop, Cranial Electro Stimulation (CES) for anxiety and addiction;
7. Trauma or wound healing in the biofeedback loop;
In 1991 I patented the test kit system to make the quantum coherency analyzer. This improves the accuracy of the system. President Geo Bush Senior and Gorbachev ended the cold war.
In 1992 I move to Budapest and further develop the EPFX. The system does not have the QQC trivector readings in the hard drive and it does not have the subspace link. This software depends on the test kit solely. This stolen software later becomes the Life system and without the test kit it does not function. The life system is later found to measure nothing as was exposed as fraudulent in its biofeedback claim. The life system does NOT have the subspace or the QQC trivector patterns and it is a fraudulent sham counterfeit non-functional copy of the QXCI.

Desire' Dubounet Patents

- Irish Patent #S1995/0437. Grant# S67328 "Apparatus and method for detecting the reaction of a subject to a plurality of substance."
- Irish Patent #S1994/0226. Grant# S60784 a homeopathic medicine
- Irish Patent #S1994/0084. Grant# S64087 a method for testing a homeopathic pharmaceutical
- Irish Patent #S1993/0215. Grant# S58223 a homeopathic medicine.

A homeopathic medicine comprises a homeopathic carrier solution which is prepared by mixing a basic solution of alcohol and water in the ratio of 1 part alcohol to 9 parts water, and subsequently mixing in sea water, brain hormone and biologically active enzymes into the basic solution in the proportion 9c, 12c and 12c, respectively. The homeopathic carrier solution is subsequently subjected to an alternating current and a direct current treatment which requires applying an alternating current of 20 milliamps at 10 volts and 10 KHz for a duration of 30 seconds and a DC current of 20 milliamps at 1,000 volts for 4 minutes. The active homeopathic ingredient is then added to the carrier solution.
The QXCI is a technology I developed in 1996, it was revolutionary and made to run on a computer with an 8 bit processor. I was designed to work on a parallel port. These computer technologies are now obsolete and ancient. Would you buy a computer sold in 2002, answer no. a 2002 computer is junk today. The QXCI ran on 12 channels every 500th of a sec. and the QXCI uses the computer timing chip for operation, it does not have its own chip. The QXCI operates on digital signals so it is limited to a variant square wave. The QXCI cannot make the complete waveforms of the SCIO. Bill Clinton is President and the Beatles second reunion song is released. I develop the QQC device and I am able to put the trivector readings into the computer. I develop the first Subspace system to work if no biological entity is detected in the harness.

In 2003 it was time for advancement, progress, growth, improvement, transition. We designed the SCIO with its own timing chip and its own computer inside. It was designed on 16 bit use. It had 238 channel every 100th of a sec. it was a dramatic advance. There are literally hundreds of thousands of improvements made to the system since we started. Everyday some improvement is considered, tested and made. All ways we work with the full legal and compliant regulations. Our new book shows over 200 publications of the technology and the history of research.
Towards a new Safe and Effective truly Modern Medicine

HEALTH IS EASE OF FLOW

Stressors block Flow, Stress is more than Just personal stress.
Stress Reduction is the key to Medicine.

When the stressor or stressors weaken the defenses of the body, the weakest link of the body (from nature or nurture) is most prone to distress and thus disease.

SCIO measures and treats

Volts and Oscillations (EMG, EEG)
Amps and Oscillations (ECG)
Resistance (GSR)
Hydration
Oxidation (Redox potential)
PH acid vs alkalinity
Reactivity evoked potential to voltammetric fields of substances (TVEP) over 228,000 measures a second of these energetic factors

Brain wave and emotions with (MCES)
Pain with (MENS) (TENS)
Trauma or wounds (EWH)
Electro Weakness Ph, Redox disorder (VARHOPE) Correction
Trickle charge the body electric

All designed to detect + reduce Electro-stress and Balance the Body Electric Automatically
Quantum Biofeedback Interfaces with the Body Electric

Monitored GSRtDCs Provided Safety + Maximum Efficacy

Get to a Licensed Biofeedback Therapist
Advances in the SCIO make it faster and much better than the QXCI and some things like emotions just become impossible with the QXCI. But some people do not understand advancement, progress, growth, improvement, upgrading. They live in the past till they need a computer then they don’t want to buy a 80-386, they say “Wait I am Not That stupid to buy an 386 computer, I want today’s technology” but they are perfectly capable treating a patient with an old antiquated QXCI. They want today’s technology but don’t want to upgrade to it.

Then in 2008 small petty minds attacked us in the press. Lies, rumors, innuendos, slanders and libel spread. A group of people tried to build a company around me. They built the Indigo. It was a great promise of new technology but the promise was unfulfilled. They sold over 2000 systems and they had to be modified for compliance. But to protect the future in America and to rebuild our reputation we developed the new Educator/Eductor. Here was a great step forward into the future.

The Educator was to be our lay person device with improvements over the SCIO. The Eductor was to be our American device equivalent to the Eductor. We had to modify the operations to be compliant with America rules and regulations.
The old Indigo had many problems and no real research. Now since the new Educator/Eductor have more research and validation, verification and substantiation the New Educator/Eductor have a maximum World Health Products Rating of 11 Platinum.

Now the new “Eductor” is released. This is a dramatic advancement in the EPFX, QXCI, SCIO, Indigo, and Educator. The Eductor has three more wave form generators; it is usb technology and can operate at micro sec speeds. The word doctor comes from the Latin word for teacher, Educator. This new technology is a new advancement in our focus on development and it will be the future of our medical use. Only licensed therapists or doctors can use one or students of the 12 month course. The anticipated price will be about 20,000 euros.

So you see progress and technology move forward. Our mission is to act honorably, ethically with due diligence and grace to help offer a defense and an opportunity for natural energetic medicine. We want to offer a drugless therapy for the sick and diseased to try before considering more harsh risky therapies. We want to work with our pill pushing medical brothers for we realize that there is a time for all things under heaven. There is a time to use lifestyle counseling, relaxation, suggestion, education, herbs, homeopathy and energetic medicine and a time for drug cut and burn modalities.

CERTIFICAT CE

SISTEM COMPLET DE ASIGURARE A CALITATII

(Anexa II, exclusiv secțiunea 4, a Directivelor 93/42/CEE privind Dispozitivele Medicale, revizuită)

Nr. 44 DM 2.3

Prezentul certificat se acordă producătorului:

S.C. BIOFEEDBACK 2014 S.R.L.
B-dul Henri Coandă nr. 2, cam. 14, Satu Mare, județ Satu Mare, România

Pentru următorul dispozitiv medical:
Sistem electrofiziologic universal de biofeedback, tip EDUCATOR

OTDM CERTIFICARE declară că examinarea sistemului de asigurare totală a calității a fost realizată conform Anexei II a Directivei 93/42/CEE privind dispozitivele medicale, cu modificările ulterioare, excluzând secțiunea 4 și certifică conformitatea sistemului complet de asigurare a calității cu prevederile relevante ale directivelor menționate.

Documentul care stă la baza acordării certificării:
Raport de audit nr. 44 – A2 – I / 08.08.2014

Președinte Comitet pentru Asigurarea Impărăției
Ing. Lazăr IORDACHE

14.08.2014
Data emiterii

Director
Ing. Ioana ȚENE

13.08.2019
Data expirării

Remizarea calității certificatului se face în conformitate cu prevederile Anexei II, secțiunea 5, a DOB 93/42/CEE și a Contractului de Certificare nr. 44DM / 23.06.2014. Se poate aplica marcajul CE-eur în cazul dispozitivelor medicale specificate în certificatul de conformitate.

EC CERTIFICATE

FULL QUALITY ASSURANCE SYSTEM

(Annex II, excluding section 4, of the MDD 93/42/EEC on Medical Devices, as revised)

No. 44 DM 2.3

The certificate is granted to the manufacturer:

S.C. BIOFEEDBACK 2014 S.R.L.
B-dul Henri Coandă nr. 2, cam. 14, Satu Mare, județ Satu Mare, România

For the following medical device:

Universal electrophysiological biofeedback system, type EDUCTOR

OTDM CERTIFICARE hereby declares that an examination of the full quality assurance system has been carried out following the requirements of the annex II of the Directive 93/42/EEC on medical devices, with subsequent modifications, excluding section 4, and certifies that the full quality assurance system conforms with the relevant provisions of the aforementioned directive.

The certification is based on:
Audit report no. 44 – A2 – I / 08.08.2014

President of the Committee for Safeguarding Impartiality
Eng. Lazar IORDACHE

Director
Eng. Ioana TENE

14.08.2014
Issue date

13.08.2019
Valid until

The validity of the certificate will be in accordance with the provisions of MDD 93/42/EEC, Annex II, section 5 and of the Certification Contract no. 44DM/ 23.06.2014. The CE marker, can be applied only for the medical devices specified in this certificate.
A trained licensed biofeedback therapist acts as a navigator to help the subjects reduce lifestyle risk of health and to emotionally deal with other issues as they arise. A therapist can monitor electrode placement, vaso-vagal reactions, displaced memories, misdirected emotions, and to help deepen the relaxation for achieving the desired effects.
