Matter is Energy, Our Bodies are made of Energy Fields That We can not Percieve Some of these fields have a spiritual source that act upon a person's Soul. This Soul is developed thru a Process of Guided Self Observations

However this is rarely Achieved due to man's unique ability to be Distracted from Spirit and Spiritual Matters by EveryDay Trivia and emotional desires of Greed, Anger, Arrogance, Delusion and Conformity Distract us from Spirit and Spiritual Development

Desire' Delicious Dubounet
Scientific Evidence That You Are Not the Body

Excerpts from books, lectures, and videos by Jagad Guru Chris Butler (Siddhaswarupananda Paramahamsa).

Let me ask you a few simple questions: Do you exist at this moment? Did you exist five years ago? Are you your body? Most people would answer “yes” to all three questions. But if you identify your body as yourself, and simultaneously accept that you exist now and also existed five years ago, then you have a problem: The body you had five years ago does not exist today. There is a dynamic turnover of atoms and molecules that make up your body. There isn’t a single particle of matter—not one atom—present in your body today that was present five years ago. The body you have today is not the same body you had five years ago. It’s not that the body you had still exists but has now changed somewhat. No. The body you had is gone. That collection of atoms appearing as flesh, bone, blood, hair, and so on no longer exists. Yet you still exist.

Studies at the Oak Ridge Atomic Research Center have revealed that about 98 percent of all the atoms in a human body are replaced every year. You get a new suit of skin every month and a new liver every six weeks. The lining of your stomach lasts only five days before it’s replaced. Even your bones are not the solid, stable, concrete-like things you might have thought them to be; they are undergoing constant change. The bones you have today are different from the bones you had a year ago. Experts in this area of research have concluded that there is a complete, 100 percent turnover of atoms in the body at least every five years. In other words, not one single atom present in your body today was there five years ago.

If you were the molecules and atoms of which your body used to be composed, you would now be a personality divided into the many new bodies that those atoms and molecules have become part of. And, of course, the molecules and atoms that make up your present body are not “new”; they too are used. Your body is made of recycled material. The matter you now call “yourself” was once part of many different collections of atoms and molecules that went by different names.
There is a Soul beyond the body

This way of looking at the situation reveals the absurdity of Sagan’s conclusion. If the body is the self—if you are a collection of molecules and atoms—then when those particles disperse, that’s the end of that particular “collection.” That collection of atoms and molecules that went by a particular, distinct, collective label (your name) no longer exists. If you are the body, then when the body is gone, you should also be gone. But this doesn’t happen.

So when you look at a picture of “yourself” taken only seven years ago, you are looking at a body that no longer exists. Every single molecule that was present in the body shown in the photography is now gone. Yet you still exist. You are not gone. Now, since the body you had seven years ago no longer exists, yet you still exist, you must logically conclude that (1) you were not the body you had on seven years ago, and (2) you are not the body you have on today.

The material body has sometimes been compared to clothing worn by the self. At one point you had a baby body; then you took off the baby body and put on a child body; later on, you wore an adolescent body; and after that, you put on a young adult body. In all cases it was you, the same self, who was wearing those different bodies.

You, the self, are the constant, unchanging principle in the sea of physical, material changes. You know that you existed seven years ago; you were there. You also know you exist right now. The same you, or self, who existed then also exists now. And this same self will exist when the present body is gone.

“The search for wisdom is a great challenge; to act on wisdom is an even greater challenge.”
~ Jagad Guru

Techniques to Help You Realize that You are Not the Body

Now that we have established that every element in the periodic table aside from hydrogen is essentially stardust, we have to determine how much of our body is made up of this stardust. If we know how many hydrogen atoms are in our body, then we can say that the rest is stardust. Our body is composed of roughly 7x10^27 atoms. That is a lot of atoms! Try writing that number out on a piece of paper: 7 with 27 zeros behind it. We say roughly because if you pluck a hair or pick your nose there might be slightly less. Now it turns out that of those billion billion billion atoms, 4.2x10^27 of them are hydrogen. Remember that hydrogen is big bang dust and not stardust. This leaves 2.8x10^27 atoms of stardust. Thus the amount of stardust atoms in our body is 40%.

Since stardust atoms are the heavier elements, the percentage of star mass in our body is much more impressive. Most of the hydrogen in our body floats around in the form of water. The human body is about 60% water and hydrogen only accounts for 11% of that water mass. Even though water consists of two hydrogen atoms for every oxygen, hydrogen has much less mass. We can conclude that 93% of the mass in our body is...
There is a Soul beyond the body

stardust. Just think, long ago someone may have wished upon a star that you are made of.

The reason we get fooled gets down to what is happening when we "see" something.

Like all life on our planet, our visual organs -- our eyes -- can only sense electromagnetic (EMR) vibrations (what "light" really is) in a fairly narrow range of wavelengths. We cannot detect anything beyond the infra-red or the ultra-violet (which, BTW, is how those terms came about!). This is not an accident: this range constitutes the vast majority of EM radiation that penetrates our Earth's atmosphere and reaches our surface. The ability to detect gamma rays, for instance, would be of no use in aiding our survival.

The wavelength of the light our eyes can detect is about 4000-8000 angstroms. However, the size of individual atoms is about one angstrom. As such, when a beam of visible light hits matter -- a group of atoms -- it's like a tank coming across a bunch of tall grass. Yes, a small object (like a flea) could maneuver amongst the empty space between the individual grass blades. However, a tank is just going to hit a bunch of them.
A tank, of course, will just crush down the grass blades. Imagine if the tank instead just bounced off the tall grass blades, and all we could detect is the rebound of the tank. We'd know NOTHING about the distance between the grass blades, we'd only know that a tank can't penetrate them.

The light that our eyes can detect is like that tank, bouncing off the tall grass blades. It's thousands of times larger than the atoms it is coming across, so all it does is bounce off them, into our eyes.

Basically, our eyes aren't built to detect the empty space between atomic nuclei.

As atoms get too close to one another their charges begin to repel each other. Once they're close enough that they can “see” the other atom, the electrons on the near side of both atoms begin to repel each other and move more to the far side of both atoms. This leaves the positively charged nuclei facing each other.

Electrons swarm around the nuclei of their atoms (in this case Helium 4). When they're brought very close together the electron clouds shift and the atoms briefly polarize in such a way that they repel.

Basically, when two atoms come too close they behave exactly like magnets brought together with the “north” ends pointing together.

The source of the ultimate “excluded volume” forces is entirely quantum mechanical: it is the fact that electrons are fermions, hence (this is the Pauli exclusion principle) cannot occupy the same volume without being in different energy states. If you attempt to push the orbital electrons of two atoms into the same volume of space, most of the electrons will need to be promoted to much higher energy states. The requirement of a great deal of energy to move the
atoms closer is what we interpret as a force. You might call it an “exclusion” force, because it comes from the exclusion principle — but it has no connection at all with any of the canonical four forces, and in particular it has nothing to do with the electrostatic repulsion between electrons. It would operate even if the electrons were uncharged.

Quantum chemistry isn’t rocket science, but it’s still pretty complicated. Atoms can share electrons, or their electrons can move so that they behave like attracting magnets, and a whole mess of other things. For example, attractive van der Waal forces can show up when atoms are close, but not too close. Slight fluctuations in the arrangement of electrons in one atom induces a sympathetic arrangement in nearby atoms (this is more specifically a “London dispersion force”). As a result, the atoms end up with dipoles lined up in a “+- +−” way, instead of a “−− +−” way, like in the picture above.

In general, the force is extremely small. But it is just strong enough to hold liquid helium to itself (otherwise it would be a gas), and hold geckos to walls.

Geckos have weird feet because they have evolved to optimize the chance of random dipole interactions between the atoms in their feet and the atoms of whatever they’re climbing. As a result, they can climb vertically on materials as smooth as glass. Pictured here is a gecko excited to learn that someone remembered his birthday.

Addressing the fact that matter is mostly empty space, if you really squeeze matter you’ll find that the electrical forces can no longer hold atoms apart. Basically, they find that it’s easier for the electrons and protons to fuse together and form neutrons. Once all the charges are out of the way the atoms (now balls of neutrons) are free to collapse together. At that point the only thing holding them apart is “Pauli pressure”, which is
fancy quantum physics speak for “they can’t be in the same place”.

Hello - I have an Indigo device and was doing a remote session on a person, only I found out later this person had died prior to when I was doing the remote session, yet everything looked like the person was still alive. Can you help me to understanding why the session/readings appeared normal even though the person was dead.

The soul lives on, the energy lives on, If you have accumulated enough spiritual power to keep it from dispersing into the ethers.

With the harness you link to the body, when you do subspace you link to the energetic soul.

When ego is lost, limit is lost. You become infinite, kind, beautiful.

Yogi Bhajan
There is a Soul beyond the body

Computerized Prayer Wheel Works

The SCIO has the First Quantum Prayer Wheel

Forty Years of Research Proves It Works

What if this reality is a dream, and when we die we wake up?
A contemplative tour through your family photo album

If you take a contemplative tour through your family album, you can appreciate the contrast between the body's ever-changing nature and your unchanging nature.

Take a look at pictures of "yourself" (your body) when it was one year old or five years old. Then ask yourself: "Where is that body now?" Look at your child body and adolescent body, and ask yourself, "Where is that body now?" Where are all those bodies that were photographed so many years ago?

Now consider the following: There is not an atom in your body today that was present when those pictures were taken seven years ago. The eyes you see in the photograph are a different set of eyes than those you are seeing with: They are made of completely different material particles. The bodies in those photographs have long since disintegrated and merged into the earth, water, fire, and air, and have gone to make up other bodies—the bodies of various insects, plants, birds, animals, humans, and so on.

Yet you are still you. You exist today. You also existed yesterday, last month, five years ago, ten years ago, 15 years ago, and so on. But that body you had one year ago, five years ago, 15 years ago, etc. does not exist today. You, the self, existed throughout all these changes of your body.

Become aware of your body and its activities

Yogis have a meditation technique that helps them to realize that they are not the body. They say to themselves, "I am aware that I am doing such-and-such." By doing this they experience a type of detachment from their body and its activities. While a yogi is eating, for example, he'll say to himself, "I am aware that I am eating ... I am aware that I am tasting something sweet." He doesn't dive into the taste—rather, he is a little apart from it. Through this technique, he gradually becomes detached from all the body's activities, sensations, feelings, and so on. He is aware that things are happening, but he’s untouched by them. He’s free from the movement of the waves of sensations, thoughts, and so on that pass over him. He’s the calm center of the storm that rages all around him.

Such a yogi and a hedonist are exact opposites in consciousness. The yogi stands apart from the body and the hedonist dives into it—trying to savor every pleasant sensual tingle. And by diving into the sensual gratification, he is diving into the material senses—that is, he is becoming more deeply immersed in false bodily identification.
You are NOT the Brain

Excerpts from books, lectures, and videos by Jagad Guru Chris Butler (Siddhaswarupananda Paramahamsa).

Many people believe that a person is the brain or some part of the brain. You may be one of them. Paul Weiss writes this about the rapid change of the molecular particles that make up the brain cells.

"Recent studies on the turnover of the molecular population within a given nerve [brain] cell have indicated that ... their macromolecular contingent is renewed about ten thousand times in a lifetime." [In other words, the matter making up each brain cell is completely renewed every three days.]

This means that your brain—that mass of matter which is contained in your skull today—is not the same brain that was in your skull last week.

The brain is used by the self; the brain is not the self. Of course, the brain is a very special part of the body—you, the self, use it to direct and control the rest of the body machine. It also serves to carry and process information coming from the different parts of the body and the external environment to you. But you are not your brain. You are the user of your brain.
It is theorized that all of the Universe came through (in ten to the minus 43 of a sec.) a singularity at the beginning. This is called the Big Bang or if you believe it was an implosion the Big Suck.

Quantum Theory tells us that any things that share a Quantum singularity remain in some contact till the ends of the Universe.

At one time all of the Universe was joined as a single ultra tiny single space. Then there was no time or space just one. After the explosion space starts to evolve with string theory holding together the multi dimensions that expand. There are 12 such string dimensions with the twelfth dimension a reflection of the whole. So there is a continued level of space that allows all things to be in contact. The subspace or the mind of God.

This proves the contact of the mind often referred to as prayer, psychic phenomena, the collective unconscious, or ESP.

There is a left over of the Big Bang in a Cosmic Background Radiation that bathes the Universe since the Big Bang. The photons in this radiation were twins and thus today any info they know is instantly with time transmitted to the ends of the Universe. The mind of God. This radiation is of the frequency detected by your TV set in an open channel. It is the kind of radiation that tickles protons like in water. Thus there is a God conscious connection of all still in place.

The Angel discovered this connective principle and labeled it the subspace quantic connection. She developed a way to use it in healing.

The Cosmic Microwave Background Radiation that bathes our Universe is the EMR connection to God

The God consciousness is connected to all via a QED photonic link
There is a Soul beyond the body

I could prove the total connectivity of all things in the Universe thru the Collective Unconscious or God Principle. A shared Dimension of all things I call the Subspace.
The reality of the soul is among the most important questions of life. Although religions go on and on about its existence, how do we know if souls really exist? A string of new scientific experiments helps answer this ancient spiritual question.

The idea of the soul is bound up with the idea of a future life and our belief in a continued existence after death. It’s said to be the ultimate animating principle by which we think and feel, but isn’t dependent on the body. Many infer its existence without scientific analysis or reflection. Indeed, the mysteries of birth and death, the play of consciousness during dreams (or after a few martinis), and even the commonest mental operations — such as imagination and memory — suggest the existence of a vital life force — an *élan vital* — that exists independent of the body.

Yet, the current scientific paradigm doesn’t recognize this spiritual dimension of life. We’re told we’re just the activity of carbon and some proteins; we live awhile and die. And the universe? It too has no meaning. It has all been worked out in the equations — no need for a soul. But *biocentrism* — a new ‘theory of everything’ —
There is a Soul beyond the body

challenges this traditional, materialistic model of reality. In all directions, this outdated paradigm leads to insoluble enigmas, to ideas that are ultimately irrational. But knowledge is the prelude to wisdom, and soon our worldview will catch up with the facts.

Of course, most spiritual people view the soul as emphatically more definitive than the scientific concept. It’s considered the incorporeal essence of a person, and is said to be immortal and transcendent of material existence. But when scientists speak of the soul (if at all), it’s usually in a materialistic context, or treated as a poetic synonym for the mind. Everything knowable about the “soul” can be learned by studying the functioning of the brain. In their view, neuroscience is the only branch of scientific study relevant to understanding the soul.

Traditionally, science has dismissed the soul as an object of human belief, or reduced it to a psychological concept that shapes our cognition of the observable natural world. The terms “life” and “death” are thus nothing more than the common concepts of “biological life” and “biological death.” The animating principle is simply the laws of chemistry and physics. You (and all the poets and philosophers that ever lived) are just dust orbiting the core of the Milky Way galaxy.

As I sit here in my office surrounded by piles of scientific books, I can’t find a single reference to the soul, or any notion of an immaterial, eternal essence that occupies our being. Indeed, a soul has never been seen under an electron microscope, nor spun in the laboratory in a test tube or ultra-centrifuge. According to these books, nothing appears to survive the human body after death.

While neuroscience has made tremendous progress illuminating the functioning of the brain, why we have a subjective experience remains mysterious. The problem of the soul lies exactly here, in understanding the nature of the self, the “I” in existence that feels and lives life. But this isn’t just a problem for biology and cognitive science, but for the whole of Western natural philosophy itself.

Our current worldview — the world of objectivity and naïve realism — is beginning to show fatal cracks. Of course, this will not surprise many of the philosophers and other readers who, contemplating the works of men such as Plato, Socrates and Kant, and of Buddha and other great spiritual teachers, kept wondering about the relationship between the universe and the mind of man.
Recently, biocentrism and other scientific theories have also started to challenge the old physico-chemical paradigm, and to ask some of the difficult questions about life: Is there a soul? Does anything endure the ravages of time?

Life and consciousness are central to this new view of being, reality and the cosmos. Although the current scientific paradigm is based on the belief that the world has an objective observer-independent existence, real experiments suggest just the opposite. We think life is just the activity of atoms and particles, which spin around for a while and then dissipate into nothingness. But if we add life to the equation, we can explain some of the major puzzles of modern science, including the uncertainty principle, entanglement, and the fine-tuning of the laws that shape the universe.

Consider the famous two-slit experiment. When you watch a particle go through the holes, it behaves like a bullet, passing through one slit or the other. But if no one observes the particle, it exhibits the behavior of a wave and can pass through both slits at the same time. This and other experiments tell us that unobserved particles exist only as ‘waves of probability’ as the great Nobel laureate Max Born demonstrated in 1926. They’re statistical predictions — nothing but a likely outcome. Until observed, they have no real existence; only when the mind sets the scaffolding in place, can they be thought of as having duration or a position in space. Experiments make it increasingly clear that even mere knowledge in the experimenter’s mind is sufficient to convert possibility to reality.

Many scientists dismiss the implications of these experiments, because until recently, this observer-dependent behavior was thought to be confined to the subatomic world. However, this is being challenged by researchers around the world. In fact, last year a team of physicists (Nature Communications 2:263, 2011) showed that quantum weirdness also occurs in the human-scale world. They studied huge compounds composed of up to 430 atoms, and confirmed that this strange quantum behavior extends into the larger world we live in.

Importantly, this has a direct bearing on the question of whether humans and other living creatures have souls. As Kant pointed out over 200 years ago, everything we experience — including all the colors, sensations and objects we perceive — are nothing but representations in our mind. Space and time are simply the mind’s tools for putting it all together. Now, to the amusement of idealists, scientists are
beginning dimly to recognize that those rules make existence itself possible. Indeed, the experiments above suggest that objects only exist with real properties if they are observed. The results not only defy our classical intuition, but suggest that a part of the mind — the soul — is immortal and exists outside of space and time.

“The hope of another life” wrote Will Durant “gives us courage to meet our own death, and to bear with the death of our loved ones; we are twice armed if we fight with faith.”

And we are thrice armed if we fight with science.

The Greatest
Prayer of All is
"Thy Will Be Done"
The timing of astral disembodiment in which the spirit leaves the body has been captured by Russian scientist Konstantin Korotkov, who photographed a person at the moment of his death with a bioelectrographic camera.
There is a Soul beyond the body

The image taken using the gas discharge visualization method, an advanced technique of Kirlian photography, shows in blue the life force of the person leaving the body gradually.

According to Korotkov, navel and head are the parties who first lose their life force (which would be the soul) and the groin and the heart are the last areas where the spirit before surfing the phantasmagoria of the infinite.

In other cases, according to Korotkov, the “the soul” of people who suffer a violent and unexpected death usually manifests a state of confusion in your power settings and return to the body in the days following death. This could be due to a surplus of unused energy.

The technique developed by Korotkov, who is director of the Research Institute of Physical Culture, St. Petersburg, is endorsed as a medical technology by the Ministry of Health of Russia and is used by more than 300 doctors in the world for stress and monitoring progress of patients treated for diseases such as cancer. Korotkov says his energy imaging technique could be used to watch all kinds of imbalances biophysical and diagnose in real time and also to show if a person does have psychic powers or is a fraud.

This technique, which measures real-time and stimulated radiation is amplified by the electromagnetic field is a more advanced version of the technology developed for the aura measuring Semyon Kirlian

Clinical Study 1 Kirlian photography as a Measure for VARHOPE
Dr. Radu Stefan

A Romanian doctor used a kirlian photograph unit to do a test of the electrical systems validity. This Kirlian imagery device immerses the patient in a safe electrical plasma that can accentuate the presence of free electrical energy. Thus a type of electrical aura can be seen. Whatever you think of this technique and it’s somewhat bizarre claims, it is undeniable that it is showing a reflection of the electrical field in certain areas of the body. He took pictures before and after chiropractic, acupuncture, and massage therapies. There was little change. But the pre post pictures of the SCIO system show an undeniable electrical change.

We report these findings and photos as preliminary speculative evidence of the proposed effect of the SCIO on the body electric.

In his pre and post pictures there are very astounding changes in the body electric shown by the Kirlian photography. This proves that the SCIO system is capable of producing and increased electrical field around the human. There was no double blind or use of a standard measure, so a new experiment was needed to be designed. We need to measure more critically the effect.
Kirlian photography Study of the SCIO Eductor

Researcher: Colonel medic Dr. Radu Stefan. Bucuresti, Romania ; 07 August 2010.

Abstract:
It is apparent that there is energy in the body and this energy flow is highly regulated. When we put the body into a high energy field of the Kirlian device there appears that the life energy follows the high voltage energy. We believe in energetic medicine and as we balance the energy fields of the body we can reduce disease. Some people have called it spontaneous remission when there is unexpected results from such new avant-garde techniques, but we believe these are not spontaneous or haphazard the healings come from stabilizing the life energies. We will measure the Kirlian field before and after using the SCIO device.

Introduction:
A Romanian doctor Radu Stefan in 2010 used a Kirlian photograph unit to do a test of the electrical SCIO systems validity. This Kirlian imagery device immerses the patient in safe electrical plasma that can accentuate the presence of free electrical energy. Thus a type of electrical aura can be seen. Whatever you think of this technique and it’s somewhat bizarre claims, it is undeniable that it is showing a reflection of the electrical field in certain areas of the body. He took pictures before and after chiropractic, acupuncture, and massage therapies. There was little change. But the pre post pictures of the SCIO system show an undeniable electrical change.
We report these findings and photos as preliminary speculative evidence of the proposed effect of the SCIO on the body electric.
In his pre and post pictures there are very astounding changes in the body electric shown by the Kirlian photography. This proves that the SCIO system is capable of producing and increased electrical field around the human. There was no double blind or use of a standard measure, so a new experiment was needed to be designed. We need to measure more critically the effect.

Method:
Kirlian photography is a collection of photographic techniques used to capture the phenomenon of electrical coronal discharges. It is named after Semyon Kirlian, who, in 1939 accidentally discovered that if an object on a photographic plate is connected to a high-voltage source, an image is produced on the photographic plate. The technique has been variously known as "electrography", "electrophotography", "corona discharge photography" (CDP), "bioelectrography", "gas discharge visualization (GDV)", "eletrophotonic imaging (EPI)" and, in Russian literature, "Kirlianography".

In 1958, the Kirlians reported the results of their experiments for the first time. Their work was virtually unknown until 1970, when two Americans, Lynn Schroeder and Sheila Ostrander
published a book, *Psychic Discoveries Behind the Iron Curtain*. Although little interest was generated among western scientists, Russians held a conference on the subject in 1972, at Kazakh State University. The corona discharge glow at the surface of an object subjected to a high voltage electrical field is referred to as a Kirlian aura in Russia and Eastern Europe, however this should not be confused with the paranormal concept of the aura. In 1975 Belarusian scientist Victor Adamenko wrote a dissertation titled *Research of the structure of High-frequency electric discharge (Kirlian effect) images*. The scientific study of Kirlian effect in Kazakhstan State University has performed Victor Inyushin.

Kirlian photography might depict a conjectural energy field, or aura, thought, by some, to surround living things. Kirlian and his wife were convinced that their images showed a life force or energy field that reflected the physical and emotional states of their living subjects. They thought these images could be used to diagnose illnesses. In 1961, they published their first paper on the subject in the Russian Journal of Scientific and Applied Photography. Kirlian's claims were embraced by energy treatments practitioners.

Scientists such as Beverly Rubik have explored the idea of a human biofield using Kirlian photography research, attempting to explain the Chinese discipline of Qigong. Qigong teaches that there is a vitalistic energy called qi (or chi) that permeates all living things. The existence of qi has been mostly rejected by the scientific community. Rubik's experiments relied on Konstantin Korotkov's GDV device to produce images which were thought to visualize these qi biofields in chronically ill patients. Rubik acknowledges that the small sample size in her experiments "was too small to permit a meaningful statistical analysis." Vitalistic energies, such as qi and prana, if they exist, would exist beyond the natural world. Claims that these energies can be captured by special photographic equipment are criticized by skeptics.

The SCIO device is a biofeedback stimulation device that has been FDA registered since 1989. The SCIO device uses a cybernetic loop to modify an autofocused signal that is designed to stabilize the body electric. We have seen in many studies positive effects of this therapy. Here we will measure 9 patients before and after.

Discussion:

So after this series of experimental tests and evaluation we can conclusively conclude that the SCIO is able to improve and stabilize the Kirlian energy field. As we improve the body electric and the energy increases and stabilizes the energy field will be fuller and more symmetrical. When the medical community sees a device function that they do not understand they call it spontaneous remission. We call it energetic medicine.
The aura is composed of seven fields within and outside the body. Each field called a density represents a specific energy range, corresponding to color, light, and sound. When densities are clear, energy moves freely through the body, unifying the physical body, the subtle body, and the causal body with a person’s higher consciousness.

Interpretation of Photo one....Indigo blue on the outside area indicates an old soul...many past lives...full of wisdom and this is the time to complete one’s mission because of the wisdom and experiences of past lives. The colors Rose and Fusia are signs of unconditional love and compassion. White throughout the entire aura is the connection with spirituality and the spirit world. The shaded areas above the head are signs of self-doubt. There is much love but a strong need to have confidence in one’s own abilities with this power.

Photo 2: after SCIO (Quantum Bio Feedback) The SCIO energetically cleanses and repairs by mending the Aura if it is ripped or torn, and then adjusts frequencies within the corresponding Auriic fields that strengthens and provides protection. Aura Cleansing Cactus is used for cleansing and regeneration of the aura and the astral body. White Angelica is used to ward off bombardment of negative energy, increase the Aura, and for strength and protection....The golden arch over the top is the energy of the Christ Consciousness. An entity appears on both sides of the person. The one on the left is Golden with green...Transformation with the Christ consciousness....The turquoise blue and white entity on the left side is about a message of the need to be in service (blue) and the focus on the service mixed with spirituality (white). The fact that there are entities on both sides confirms the opportunity to complete one’s mission in this life and this person has support from higher beings who have come to help. There is green in the heart chakra and is mixed with purple as well. The transformation of the heart with the purple color is of the highest vibration of spirituality such as seen on Easter when the priests celebrate the Ascension he wears purple...All colors of the second photo are higher levels of vibration and show a shift from the first photo of love but with self-doubt...to the golden, purple and transformational greens...

Encouraged by visits from scientific dignitaries, the Kirlians became convinced that their bioluminescent images showed a life force or energy field that reflected the physical and emotional states of their living subjects, and could even diagnose illnesses. In 1961 they published their first paper, in the Russian Journal of Scientific and Applied Photography, and their story then reached the west via the 1970 book Psychic Discoveries Behind the Iron Curtain."

37. The *Kirlian Technique: Controlling the Wild Cards*. The Kirlian effect not only is explainable by natural processes; it also varies according to at least six physical parameters. Arleen J. Watkins and Williams S. Bickel, *The Skeptical Inquirer* 13:172-184, 1989.

Are out-of-body experiences valid? Dr. Crookall at the University of Aberdeen has written 9 books on out-of-body cases due to the overwhelming amount of evidence in their favour. A survey of 380 Oxford students showed that 34% had an OBE. A separate survey of 902 adults revealed that 8% have had an OBE. In a study of 44 non-Western societies, only 3 did not hold a belief in OBEs. Another study showed that out of 488 world societies, 89% had at least some tradition regarding OBEs. So this phenomenon is familiar and lots of people claimed to have experienced it before, but is there any scientific credibility to this phenomenon?

A fascinating experiment was done by Dr. Charles Tart, who was a Professor Emeritus of Psychology at the University of California. He had also served as a Visiting Professor in East-West Psychology at the California Institute of Integral Studies, and as an Instructor in Psychiatry at the School of Medicine of the University of Virginia. A study he published in the *Journal of the American Society for Psychical Research* may be the most infamous OBE study ever done. He documented the out-of-body experience of a young woman who was one of his research subjects. She was in a room with nothing but a bed, a shelf, a clock, and an observation window where Dr. Tart observed from another room. She also had electrical devices hooked up to her head to detect brain wave activities, which can be seen in the diagram below.
What makes this particular out-of-body experience remarkable is that she was able to leave her physical body as Dr. Tart watched from the other room and read a 5-digit number of 25132 off of a piece of paper that was on a shelf in the corner of the room. The number was at a significant distance above the bed so that she would not be able to read the number even if she was standing, and she reported seeing the correct number him upon return to her physical body which remained attached to the bed as she was being watched. EEGs, REMs, and galvanic skin response were all recorded before and during her OBE which indicated a significant alteration in the readings during the time she left her body. Her OBE a good example of “veridical perception” which is where verified events are observed while in an out-of-body state.

As Dr. Tart concluded: “While the physiological data are limited by dependence on her retrospective report in correlating physiological pattern with the experience, it seems as if her out-of-body experiences occurred in conjunction with a non-dreaming, non-awake brain wave stage characterized by predominant slowed alpha activity from her brain and no activation of the autonomic nervous system. Two incidents occurring in the laboratory provide suggestive evidence that the out-of-the-body experiences had parapsychological concomitants. In summary, this brief study found a fairly clear-cut correlation between several of Miss Z’s reported OOB experiences and a physiological pattern characterized by a flattened EEG with prominent alphoid activity, no REM or skin resistance activity, and normal heart rate.”

This is huge, because not only does it show that the experience of leaving your body is correlated with abnormal changes in brain-body activities, the test subject was also able to go and read a 5 digit number. She also reported the correct positioning of the piece of paper that had the number on it, which as flat on the shelf as opposed to leaning against the wall which is what she was expecting. By the way, the odds of guessing a 5 digit number first try are less
than 1 in 59000, so to claim that she just so happened to guess it right on her first try is out of the question.

I have had 2 out-of-body experiences myself, one of which I observed real events happening in a different location in my house, so I can personally testify to their validity. I saw exactly what my dad was doing and wearing, and I saw exactly what was on television at the time, all of which were verified to be true after I awoke.

What skeptics are really good at is leaving out pieces of evidence that they can’t explain, and point to how some scientific studies have replicated the feeling of being out-of-body by some virtual means. There is a difference between the illusion of being somewhere else, and actually seeing real events happening in locations that your physical body has absolutely no access to. This study is another piece of evidence that gives serious scientific credibility to the idea of a soul.
There is a Soul beyond the body

When you walk on the path of spirituality, one thing is very essential: you must always see the Hand of God in every action.

-Yogi Bhajan
There is a Soul beyond the body

The Main Fact of Life is

You Do NOT Create the World or the Events Around You

But You Do Control Completely Your Interpretation of the World and Events Around You
